UNE IN SUPPORT OF SPORTS

The President of Columbia, Professor E. W. Hitchcock of Harvard, and Mr. Vincent Fuller, President of Pennsylvania, recently called on the Committee of College Professors of the American Association of University Professors with the object of presenting the Committee's decision to admit students to the university on the basis of academic promise, and a neglect of athletic work. The committee's decision is that the undergraduate's not devoting their time to football or to any other sports but to the excision and neglect of their eye

He further stated that the university was not "sufficiently large, efficient, and enthusiastic to absorb all of the time and interest in the curriculum." The idea of the American University, Mr. Hart, is that of the average, the student's attention from academic pursuits, it has been professors of the necessity of posture. "It's a matter of the recommendation for changes in methods in conducting football, so as to fit the American Association of College Professors, President E. W. Hitchcock, said: "I have no interest in the elimination of football or sports in general, since I cannot see what is coming in their place. But the aim of the student body is certainly not going to devote all of their time and interest to the curriculum."

"The American University, as the President of Columbia, Mr. Hitchcock, is that of the average, the student's attention from academic pursuits, it has been professors of the necessity of posture. "It's a matter of posture."

ATTENDANCE—30% of the students, 40% of the alumni who possess automobile. The average yearly income of those persons interviewed was $19,250, which is slightly above the average $18,000 or $20,000. Of those, 44.5 per cent, own their own homes. This is because professors in other college graduates own homes of their own. One interesting fact shows that 10 per cent of the faculty better men own automobiles. The significance of this statement is noticeable when it is considered in the 26.4 per cent of the general alumni who possess automobiles.

The married men who answered, 625 of them, reported that they are fathers of 2,108 children, or an average of 2.0H children for each married man. Of those, more are fathers of one or more than one.

A BROAD POLICY

The policy that the University has adopted in dealing with the situation which has arisen from the recent kidnapping period and led to the withdrawal of the Penn State from the Penninian Field competition, is very broad and liberal in its scope. It consists mainly of creating a general objection to such practices in the opinion of the great mass of students.

Of course, there have been actions taken which will, in all probability, result in the expulsion of students from school of a nature of the most serious offenders. This was certainly to be expected after the full reports as to their actions have been carefully considered. The impression which was created in the minds of the residents of Philadelphia and the surrounding suburban sections by the prank which were perpetrated by these men was most unfavorable in the reputation of the University.

In addressing the members of the Freshman Class at yesterday's compulsory meeting, Dr. Pennington stressed the fact that the fair year men had not broken faith with the University authorities. Besides the fact that they had failed to appear in the ranks of the contest as prescribed by the Undergraduate Council, they materially interfered with the conduct of classes.

According to an agreement between the Penn and the Undergraduate body last spring the students are to take the conduct of athletic organizations fully into their hands. This year's incidents have not interfered with the conduct of athletic activities. This agreement was passed by the undergraduates, who fully realized its significance. This year's holiday was held on the Monday following the triumph of the Red and Blue football team from Yale. Therefore, any demonstrations that would interfere with official University business are in violation of this agreement.

In the course of his speech, the President also appealed to the sense of right and wrong which he assumed that all of the men possessed. Those actions, he stated, were certainly not those of thinking men, but were the result of the sick spirit which contended the majority of the freshman.

In seeking to remedy the entire situation, this attitude is the most effective kind to assume. The enormity of their actions demands that severe measures be taken to punish the principal offenders. Punishment is extremely necessary in some cases, but if the class can be impressed with the spirit that such actions are unbecoming to Pennsylvanians, a greater victory will be gained.

This policy, as adopted by the University, is entirely consistent with the broad principles which have characterized the administration of all its departments. It also appears to be the most effective way to curb these disturbances in the future.

SCOOLARIFIC EVENTS

Once more Pennsylvania is playing host to a group of scholastic athletic contests. The Intercollegiate Tennis Tournament was played, with light of the pleasant outdoor competing. Among the participants in this tourney are a number of the leading scholastic racket-wielders of the Middle Atlantic section.

The process of this undertaking depends on a great extent on two great activities: competitive management and the keeping and entertainment of these stars. The first of these conditions is, in my mind, the most important at this time. The housing and entertainment of visiting teams has been well cared for at scholastic tournaments, and come usually has almost always been an entertainment.

The management of scholastic tournaments has been found to be very low in some tourneys in past years. In most cases the bulk of the work in conducting these events has fallen in the undergraduate charge of the team. This along with other events has been found to mean a burden, and the management of both projects has suffered.

As the success of these scholastic events is so important to the University, these tournaments should receive the greatest consideration of the Council on Athletics. We would suggest that a graduate manager of tournaments be appointed to conduct all tournaments, regardless of the sport. This would place the burden of running the meeting entirely upon the shoulders of one experienced man, with the responsibility centered. It would make for efficient management of tournaments and would relieve the undergraduate managers of the added responsibility.

MUSEUM COLLECTS TOMB

STATUETTES FROM CHINA

Study Being Made by Miss Helen Fernald, Assistant Curator of the Far

Eastern Section

ENTOMB LIVING WITH DEAD

Miss Helen F. Fernald, assistant curator of the Far Eastern section in the

University Museum, has completed a study of some few specimens of Chinese tomb-

statuette recently added to the Museum's collection. The study has been made

with the intention and significance of the miniature statues to Chinese art and

civilization.

It was the custom among the Chinese to entomb live friends and relatives with

the deceased, and these statues, supposedly representative of the dead man and

his companions, are the substitution for the ancient and cruel rite. Confucius' statues

tell of the burial of three of his brothers in this fashion, and this is the reason, according to Miss Fernald, why she has undertaken the following investigation.

In 200 b.c., the ornamental custom was revived despite Confucius’ teachings

for a short time, when, at the death of Chin Shih Huang Ti, all the tombs of his

kings and all of the workmen in his lands were buried with him. However, by the

end of the third century A.D., the tradition had been fully established and clay statues

enlivened human beings in the burial.

All of the figures are made in two sections of common pipe clay, broken in the center. Some were dipped in a colorless glaze which has given them a green tint, especially in the faces of men and women. In others, the glaze is finely brushed, giv-

ing the statuettes a warm, creamy stature streaked with brown. Individualization was given to each by the addition of painting or some other adornment. The smallest effigies are ten inches high, while the more prominent are from two to four feet in height.

Fernald’s attempt was made, Miss Fernald maintains, to portray the features and
cultural aspect of the wealthy, but the common practice was to purchase as elab-

orate and as many figures as one could afford. She even goes so far as to premise that the figures were turned out by potters in thousand lots.

In describing the collection, she adds: “These statues are composed mostly of red and white stoneware mounted on lacquered, luted and polychrome boxes, vases, vases, soap dishes and kitchen. These are and other services, such outfits, miniature in their official robes, infus of high rank and of

and Industrial problems have been applied to others. For instance, psychology can give us an insight into the fundamental principles of human behavior, and it is this fundamental knowledge that can be used to solve practical problems.

In the last few decades, psychology has become a science, and it has made great strides in understanding the human mind. It has shed light on the nature of the mind, and it has helped us to understand how it works. Psychology has also contributed to the development of new instruments, such as brain scanners and electroencephalographs, which have helped us to understand how the mind functions.

In addition, psychology has helped us to understand the role of the mind in the development of new technologies. For example, the development of artificial intelligence has been greatly influenced by the work of psychologists.

In summary, psychology is a science that helps us to understand the nature of the mind and how it works. It has contributed to the development of new instruments and technologies, and it has helped us to understand the underlying principles of human behavior. It is an important field of study, and it is an area that will continue to grow in the future.
