In spite of his professions, a man's faith seldom reaches a higher level than his actions.
When you visit Britain, you can explore some of the most historic and romantic spots in all Europe. Over this historical highway lie the ancient cities of Ely, Lincoln, Norwich, York, Edinburgh and many other old towns celebrated in romance and legend. Added to the attractions of natural beauty and history are fine buildings and institutions, mighty castles and landmarks in American life.

You will understand and be better understood in England and Scotland than anywhere else in Europe. You can play golf on the world famous courses at St. Andrews and North Berwick—on the land of the gods. In addition to the "Flying Scotsman," the famous train between London and Edinburgh, there are fast and frequent trains to all the numerous points of interest.

**LONDON & NORTH EASTERN RAILWAY**

May 23, 1929

The next college of Cambridge University was founded in 1284. Since that time, the history and development of this university has been as thoroughly documented as any in the world. The University of Pennsylvania will feature "The Building of Pennsylvania," under the leadership of "Charlie" Anderson. John H. White, W. J. will head the charge of the Young People's Meeting at 2 o'clock. A new series of lectures on "The Modern Problems in the Life of Jesus" will be taken up at the Walter Presbyterian Church, with Paul Emsley directing the forum.

**ELEPHANTS**

The elephant is man's most intelligent helper. But—consider this interesting comparison:

An elephant is much larger than the electric motor of a "yarder" or logging machine. The "yarder" has the power of twenty elephants; it handles clusters of logs; it works dependably; it handles clusters of logs; it works dependably, twenty-four hours at a stretch, if necessary.

Twenty elephants would eat daily 10,000 pounds of green food, which a corps of attendants must supply at the throw of a switch. Twenty elephants would eat daily 10,000 pounds of green food, which a corps of attendants must supply at the throw of a switch.

Power used in the modern industrial world is applied through electric motors—tireless "iron elephants" that are operating the most magnificent machines to museums, along with such old-time household articles as wash-tubs and ordinary irons—and stuffed elephants.
