AIRC Meeting
To Feature Topic, 'Decisions USA'

"A World Safe For Man- kind" will be the topic of the Ninth Annual Conference of the American Institute of Relations Clubs to be held at the Warwick Hotel April 6-7.

The conference, in conjunction with the Wood- ruff Wilson Board of Directors, will be under the presidency of Vera M. Dean, editor of the "Logan Hall" following Spring va- luation and will be held in mid-April. A nomi- nation will be open to the pub- lic, said Samuel Schecter, assistant director of the Mask and Wig Players. Willis Hopewell, a graduate of the University of Pennsylvania, will be the keynote speaker of the event. The talk was strictly in- formal. The talk was given by Dr. Kenneth E. Appel, head of the American Psychiatric Association.

The third award, presented by the fourth in the spring series of events, will be held at 8 p.m. on Friday, April 13, in order to attend the University of Pennsylvania and the Office of the Registrar, he said. There, it is possible for applications that are much gr- eater. The American Psychiatric Association and the Hillel Foundation are much more important to the students.

The problem of the show revolves around the possibility of continuing the show for the next year. The play, "The Mad Ads," will be presented in the American Psychiatric Association's annual Conference of the American Psychiatric Association.

The board has at least one job for the government under the discretionary of the university, he said. There, it is possible for applications that are much more important to the students. The American Psychiatric Association and the Hillel Foundation are much more important to the students.
Post Mortem . . . It seems that the other five graduates of the 1956 class and I are all crammed into a small, stuffy classroom. It seems that our stocks have never been higher. We should like to do likewise. As we start in our second column, it's an honor and a responsibility to report. What do you see? We are all candle-striking, keeping an eye on the old clock. The city police are in an over-exuberant manner which some may term "riotous." The tensions and pressures of the past few days have taken their toll. It is understandable, but the behavior of their fellows, we could relate, and I will continue until it is over.

The problem, therefore, is not the nature of the penalty to be inflicted but how to arrest the disturbance before it becomes necessary to arrest the disturbers. Certainly, curtailing, club-swinging policemen breaking down fraternities, is not the answer. For a possible unconstitutionality of their behavior, it is purposeless.

We are pleased that, despite student apathy, the Dean of Men's Office, the Committee on Student Affairs and the Alumni Interfraternity Council are cognizant of the problem, and are trying to solve it.

Perhaps the answer is the formation of a University police service, with a broader scope and higher status than the campus guards, which could act as an intermediary between the police and the student body.

At any rate, a solution will never be forthcoming unless students focus their attention on their own collective welfare and not on "hanging a frail fraternity."

ADVENTURES IN SOCIAL SCIENCE: NO. 3

Today, ranging again into the fascinating world of social sciences, let us take up the study of man and his origins. The origin of man was indeed a vexing question until the Frenchman, Jean-Louis Sigafos discovered the skull and shinbone of Pithecanthropus erectus in Java in 1891. The skull was doing in Java is, incidentally, quite an old story. Sığafos was born at Athens, Greece, in 1854, and died in 1952. By day one could always find him at a bazaar coffee shop, smoking his cigar and pouting at the girls; each night he was a fashionable casino where he gambled heavily at roulette and jacks; in between times he worked on his stamp collection.

...the story of man and his origins...

(Well air, one summer Sigafos lost his entire fortune gambling at the casino, and he was seriously contemplating suicide when a ray of hope appeared in an unexpected quarter. It seems that Sigafos, through the international stamp collectors' journals, became aware of a Frenchman's claim to have discovered the skull of a prehistoric man in Java, a mission-educated savage named Lotus Petal. McGinnis, himself an enthusiastic stamp collector. The nature of their correspondence, though friendly, had been entirely philatelic. Now, suddenly, a new kind of letter came from Lotus Petal. She declared that she had come across some old documents on Sigafos, she loved him and wanted to marry him. She said she was eighteen years old, became his wife, and signed her name as Sigafos. She declared that although she had never seen him, she had been in correspondence with a girl in Java, a near-kin of a famous stamp collector, the Quaker.

The first sight of his prospective bride failed to delight Sığafos. She was, as she said, beautiful — but only by local standards. Sigafos had serious doubts that her bright red hair, though friendly, had been entirely philatelic. Now, suddenly, a new kind of letter came from Lotus Petal. She declared that she had come across some old documents on Sigafos, she loved him, and wanted to marry him. She said she was eighteen years old, and signed her name as Sigafos. She declared that although she had never seen him, she had been in correspondence with a girl in Java, a near-kin of a famous stamp collector, the Quaker.

Sığafos took one look at the mound of prune pits which was his dowry, gnashed his teeth, and stomped off into the woods, an even greater disappointment coming when he met her father. Sığafos had serious doubts that her bright red hair, though friendly, had been entirely philatelic. Now, suddenly, a new kind of letter came from Lotus Petal. She declared that she had come across some old documents on Sigafos, she loved him, and wanted to marry him. She said she was eighteen years old, became his wife, and signed her name as Sigafos. She declared that although she had never seen him, she had been in correspondence with a girl in Java, a near-kin of a famous stamp collector, the Quaker.

Crew Lists Eight Races: Opens Season at Rutgers

The Pennsylvania varsity crew will begin its season of competition on Saturday, April 14, when it meets Rutgers in a dual race at New Brunswick, New Jersey.

The Red and Blue oarsmen enjoyed their best campaign in history last year when they won every race but one. The Quakers only defeat came in the Intercollegiate Rowing Association regatta where they finished behind Cornell and the University of Pennsylvania.

West Henley Regatta

Penn has beaten Cornell and Yale in the other two races in which the crews clashed and went on to win the IRA regatta to win the Henley regatta in England, defeating some of the world's finest crews. The Penn eight then traveled to Germany where it won all of its races.

The Henley Regatta has been open to the Penn oarsmen since 1873. Jack Guest was unable to compete at all due to a bad back. However, Fred Lant, an unheralded junior, filled in as well for the Canadian star that the Quakers hardly missed him.

Three Cup Races

Bentley will have two other dual meets, both at home with Wisconsin on Skimmer Day and with Cornell on Lake Carnegie. The Penn crew, normally crew in three cup races — Childe Cup, sponsored by the National Geographic Society and Princeton, the Blackwells Cup awarded Columbia and 3rd by the New York Yacht Club, and the Adams Cup with Navy and Harvard, will also have a Blackwells Cup event to row on the Schuylkill this year besides the Henley.

The Quakers will also enter the IRA regatta sponsored by the Eastern Association of Rowing Colleges, regatta.

Frosh Nine Opens Practice Session

Pennsylvania's frosh novice baseball team faces the 1956 season with a maximum of nine days of drill before its first game.

"Because of this fact the team should not hit his peak until late in the season," said frosh mentor George Topoff.

The yearlings began their practices season at River Field yesterday and will continue until the Easter vacation before letting the weather permits. They will receive some room in preparation for their first game on April 14th against Germansco Academy at River Field.

Penn Relay Schedule:

The Quakers have scheduled three conference meets — one more than has ever been slated previously. The crew will have a 12-man schedule and will meet eight teams as Drexel, Princeton, Delaware, Swarthmore, Lafayette, and several high school squads will also be cut in.

The frosh team will be cut out of the four and seven record of last year's club.

Track Team Schedules

Three Ivy League Foes

The trend is towards the Ivy League in Pennsylvania outdoor track this year, and the Quakers have scheduled three conference dual meets—one only Ivy school this year—whereas the Quakers previously won in 1955. The Penns, which defeated Penn, 72-68, last year, and Cornell, and the only Ivy school to defeat the Quakers in recent memory, are the foes of the Quakers this year.

The Quakers open the season on Saturday, April 8 and 7, in which both AAU and collegiate performers from all over the United States will participate. With John Haines en route to Africa and the meet coming so early in the season, it will serve mainly as a practice session for the Quaker athletes.

Penn will face the all-meet of the Eastern Association, April 27 and 28, on Franklin Field. Over 300 track and field athletes will participate in the 68th Annual Penn Relay Carnival. Last year the Quakers' Willie Lee led for first in the high jump with three others. Haines took second in the 100 yard dash; and the mile relay team placed second.

Columbia Star performer, Howard Barber, who set an American record, has pole vaulted 18' 6" last spring to Penn's John Gray in the Polar meet.

THERE WAS NO STRIKE OF YOUR BRAIN POWER!

Here are just a few of the scientific and engineering developments awaiting you at Westinghouse

Breaking the Steam-Pressure Barrier... the first steam turbine to operate at 5000 pounds pressure has just been designed. This is double of that previously built.

Further Advances in Steam... include completion of a $6 million ultramodern research and development laboratory and the design of a $35,000-kw turbine generator, the largest and most efficient.

Nuclear Power... now in design is the first homogenous or liquid-fuel reactor for a 100,000-kw nuclear power plant. Instrumentation research is also progressing rapidly for nuclear power plants.

Bomarc... in the works is seeker head and ground control for "Bomarc", a long-range guided missile.

Metals Improvement... a new $6 million metals development plant with complete facilities for developing new metals and alloys and improving metallurgical techniques.

Revolutionary Decision Devices... Cypak" has been developed, which is a switching circuit device with no moving parts for industrial applications capable of performing millions of operations with virtually no wear.

Semiconductors... nearing completion is a multimillion-dollar plant for the development and production of silicon, germanium, and equipment has been opened that will advance and extend automation.

Aircraft Alternator... a brushless alternator for high altitude and high temperatures using rotating silicon rectifiers... a Westinghouse first.

Aircraft Control... new Magamp and transistor controls for aircraft power.

 Doesn't This Prove That We Are Ready To Go? The list above shows just a few of the exciting new developments under way at Westinghouse. There are new plants, new factories, new laboratories, new endeavors in many fields. There is room for you to grow in many directions.

PHONE COLLECT... To get all the facts for your decision, Phone Collect to C. H. Elbert at the Westinghouse Educational Center, EXpress 1-2360, Extensive facilities are at Westinghouse Electric Corporation, Education Center, Archbold Boulevard at Braddock Road, Pittsburgh 30, Pennsylvania.

You CAN BE... if it's Westinghouse...
Quakers Win Ninth Spot in NCAA Fencing Event

Pennsylvania's fencing team, as it usually does, finished the season on a high note as it did better than was expected in the National Collegiate Fencing Tourney with a ninth place finish in a field of 29 entrants.

Illinois won this year's NCAA competition with 90 victories in 116 bouts but did not disturb the all-time record of 94.5 set by Penn's Bob Parman, Jack Yoo and Frank Dietime in 1950.

Penn won 60 bouts. This year's Quaker squad, after a disappointing showing in the IFA (Intercollegiate Fencing Association) Tourney, with 73 bouts in 104, won 104 bouts but did not disturb the Promish. Promish had fenced by his epee protege.

This was a One performance considering that only one of the three Penn fencers, co-captain, Jay Kaplan, is a senior, while most of the competitors were fourth-year men.

Kaplan, who won 25 bouts and lost 14, was sixth in the individual saber competition which was won by Gerald Kaufman of Columbia with a 32-3 mark. Joe Trumble represented Penn in foil and won 21 of 35. Only a fourth-year man, he has more years to do even better.

Promish Impresses

Pennington wins ninth spot in NCAA fencing event. Joe Trumble is sixth in individual saber competition. Promish had fenced by his epee protege.
Opportunity for June Accounting Graduates

If you have better than average grades and are seeking a career in an accounting organization where you can make your mark rapidly, we believe you will want to consider the possibilities of joining with us.

We are a national firm with a diversified practice covering all phases of accounting, auditing, tax, systems and advisory services.

Through affiliation with us, you can get a thorough training, proper compensation and a wide experience. You will have the guidance of men who will encourage your progress and provide you with the opportunity to take charge of engagements early in your career.

A pleasant, permanent relationship with growth in position and income is assured those who demonstrate a capacity for leadership and professional competence.

Our personnel director, Richard H. Seidman, will interview on campus on April 25th for affiliation with any of our offices. Please advise the University Placement Office of your desire to see him during his visit. If you prefer, you can write him directly at 90 Broad Street, New York 4, N. Y., for an appointment at his office.

LUCKY DROOLDES! PURR-FECTLY HILARIOUS!

WHAT'S THIS? for solution see paragraph below.

YOU'RE ON THE RIGHT TRACK when you light up a Lucky, because Luckies taste better. Only fine tobacco—naturally good-tasting tobacco that's TOASTED to taste better—can give you taste like this. All of which goes to explain the Droodle above: Light-up time in caboose, as seen by halted motorist. Switch to Luckies yourself. You'll say they're the best-tasting cigarette you ever smoked.
