Death of a salesman

A few minutes after noon on Monday, the tumultuous five years of the Johnson Administration will end. Johnson was born in 1908 and died in 1963.

The world outside—Hello, hooray!

"Let the show begin," announced producer Charles H. Farnum of the Washington-based Ford Foundation for this year's Ford's theater production, "Death of a Salesman.".."Millions of tiny eyes were watching the audience as Johnson, his top lieutenants, and the diplomats gathered here and in countries around the world, watched the drama unfold..."

Johnson's successes have been largely in the domestic arena, where he is most knowledgeable and most comfortable. His programs were counted successful because Johnson was able to steer controversial measures through Congress. The creation of the civil rights laws in 1963 and 1964 indicate that a new approach to the problems of the disadvantaged may have to be implemented if real success is to be counted. Governmental paternalism will not be countenanced by blacks who, after long years of servitude, have gained a consciousness and solidarity which resulted in the deaths of thousands of Americans in Vietnam. Johnson was unable to halt the escalation of a war that was being fought on two fronts, a war which had alienated American感情 from America.

Johnson's mistakes in the area of foreign policy have been well chronicled. Vietnam persuaded his diplomacy and eventually wielded the strength and flexibility of the United States in other crises and areas of the world; the NATO Alliance has been less flexible and more sensitive to change than the United States' Alliance for Progress. Johnson was unable to reach deals with China or create a viable China policy: U.S. relations with China remained a tangle.

Power has replaced rationality in an increasingly dis-trustful world. Frank's voice boomed from a loudspeaker in the arena, "The military establishment convinced Johnson that they would triumph, tomorrow if not today. The State Department..."

But the Tet offensive and for all proved that the Viet Cong had tremendous strength, which the bombing of the North could not overcome. The Tet offensive, with its apparent refusal to consider the major thrust of the Vietnam struggle, is a powerful argument for the notion of a war with occupying colonial powers. And it had this crucial aspect of the Tet offensive that had neither had any military power could not save an essentially political, and morally charged, war.

Johnson, in his 1964 address to the nation on the situation in Viet Nam, seemed to have realized that military power could not save an essentially political, and morally charged, war.

Johnson campaigned in 1964 against the unreasonable Republican candidate. He professed that he was a candidate for the Vietnam War, which was mistaken for a pledge to end U.S. involvement in Vietnam. Johnson was fortunate in the choice of his own side of the situation to escalate the Vietnam war, which resulted in outright critics crying that Johnson was a liar. The credibility gap was created. Johnson's personality and preface for political intrigue heightened belief that Johnson could not be trusted and finally he was not.

The New York Times editorialized last Sunday that Johnson "has no reason to fear history's judgment..." Since the New York Times editorial is often the most influential of the nation's newspapers, the question is whether he will seek re-election in 1968, he has blunted the thrust of his criticism. He said that he was seeking peace in Vietnam and no one could say that he wasn't because he was now an elder statesman, so long a self-seeking politician.

What history will record is that Johnson pursued policies which will be the deaths of thousands of Americans in a place where they would have been more than willing to accept the lives of their own. The country had survived but was weakened immensely. The latest drama and hostilities had surfaced and taken a huge toll in a way which is probably beyond scientific measurement: a wave of suicides took place, were alienated from America.

In 1968, the nation which the Johnson Administration had initiated to so many areas were virtually ignored by one another. The United States and the free world, which in Greek tragedies, is the downfall of the play's protagonist, was the downfall of the first great salesman.

But in this case, the character was the United States of America. If the character is not dead, which it is not, then the action of the play is not over. The action is the growth to middle-age and found itself without its youthful conviction and bright ideology.

Johnson's America had become Arthur Miller's Willy Loman, a character who will be judged the best of our time.
Dear Mr. Galvin:

The trend on the nation’s campuses is toward greater freedom and responsibility for the individual student. Where the action is extension of existing hours for work on independent study projects, the result is the individual, and a growing array of flexible alternatives for that individual. Yet when he looks at business, and particularly at big business, a student sees an organization oriented to the group rather than the individual, and to that group’s security rather than the individual’s challenge. The “group is” any collection of administrative peers and immediate supervisors which meets frequently at all levels of the bureaucracy.

What began as an attempt to imitate the highly successful “team” of technologists has become a plague of group-oriented bureaucratic. And whereas the team produced, the group pondered. The team had to be oriented to the individual, to the individual’s challenge. That “group” is any organization oriented to the group and its role in our changing society through the intermingling of individual talents. Those talents need each other for the attainment of composite results. In the pooling there is no loss of individuality or freedom. It is not a phenomenon of this generation. It is a condition characteristic of the mapping process.

As a college student and member of several important campus committees, you must be aware of the importance of individuals pooling ideas and efforts. University-sponsored research programs are intruding into needed social reforms, and working out pilot projects as prototype solutions—methods to overcome widespread idiocy in the ghetto, to encourage self-help through self-help, to move from paper work to clean hands. Even actions undertaken by the dissenters and protesters on campus result from “committee action” and not the blanishments of one individual.

The concept of granting more and more freedom to act responsibly, with authority, is not alien to business. It is characteristic of the growing phases of a major enterprise. No one sector of the economy has the technical know-how or resources to carry decisions involving millions of dollars and affecting thousands of employees and the public. An inefficient or conformist think group would waste talents, manhours, and money.

Business is to blame for the fact that today’s college students must make a critical choice between business and other careers without sufficient knowledge on which to base their decisions.

Students daily exposed to the campus are well-equipped with knowledge about teaching, an abundance of facts on medicine, government service, and many other careers without sufficient knowledge on which to base their decisions. Students daily exposed to the campus are well-equipped with knowledge about teaching, an abundance of facts on medicine, government service, and many other careers without sufficient knowledge on which to base their decisions.

It is not a phenomenon of this generation. It is a condition characteristic of the mapping process. It is just a phenomena of this generation. It is a condition characteristic of the mapping process. It is just a phenomena of this generation. It is a condition characteristic of the mapping process.

Businessmen are.

Arthur Klebanoff

Dear Mr. Galvin:

The desire of young people for greater individual freedom and responsibility is a characteristic of the mapping process. It is just a phenomena of this generation. It is a condition characteristic of the mapping process. It is just a phenomena of this generation. It is a condition characteristic of the mapping process.

As a college student and member of several important campus committees, you must be aware of the importance of individuals pooling ideas and efforts. Nobel prize winner to speak on optics

Dr. Haldan Keffer Hartline, who won the 1967 Nobel Prize for his research on the mechanisms by which the eye sees, will speak at 5 p.m. today in the Auditorium of the University School of Medicine, Alumni Hall of the University Hospital.

Hartline will deliver the 1969 lecture of Alpha Omega Alpha, national medical honor society. He will speak on "Function of the Optic Nerve," the Conference of Physiology at the Rockefeller University.

In addition to the Nobel Prize, which Hartline shared with Dr. Ragnar Granit and Dr. George Wald, he received the Howard Crosby Warren Medal (1943) from the Society of Experimental Psychologists.

Expanded bus service starts for spring term

As expanded University bus schedule has gone into effect for the spring term, students and faculty will find that they have a variety of schedules from which to choose, The free center line now goes as far north as 46th and Southgate Sts. Each complete trip, which includes the return, covers 33 miles. The last bus leaves 6:30 p.m. daily, beginning of 5th each evening.

The bus route is:

- SOUTH on 34th to bus stop; END OF LINE, START ANOTHER TRIP.
- NORTH on 33rd St. to Walnut St.; (STOP)
- NORTH on 39th St.; to Chestnut St.
- NORTH on 45th St.; to Spruce St.;
- Continue SOUTH on 41st St. to Baltimore Ave.;
- EAST on Chestnut St. to 34th St.; STOP Sergeant Hall
- EAST on Chestnut; to English House; STOP
- EAST on Chestnut St.; to 38th St.; (Cheston & Harrison Dorms STOP)
- EAST on Locust St.; to 40th St.;
- SOUTH on 41st St.; to Spruce St. (STOP; Berkshire Hall)
- Continue WEST on Walnut St. to 41st St.

Hartline began his research on the mechanisms by which the eye sees, and recorded single optic nerve fibers in the retina and rodent visual centers. A few years later he was the first investigator to localize single optic nerve fibers in the retina and rodent visual centers.

In addition to the Nobel Prize, which Hartline shared with Dr. Ragnar Granit and Dr. George Wald, he received the Howard Crosby Warren Medal (1943) from the Society of Experimental Psychologists.
ICA show on 'New Art' opens

The Institute of Contemporary Art's first show of the new year, "Plastics and New Art," is now on view until Feb. 10. The exhibition, which is part of the ICA's current "Art for Every Day" season, illustrates the present day usage of this new material, being shown in the ICA's main gallery on the 3rd floor.

"Plastics and New Art." The works of art range from simple objects done by hand to brightly colored, translucent creations. In addition to machinery, a variety of objects is showcased, including furniture, lamps, and sculpture. Some of the works are abstract in nature, while others are highly detailed. The exhibition is open to the public every day except Sundays.

The coeds are Becky Mitchell, a junior majoring in political science, and Carole Bolsey, a senior majoring in history. They are interested in sharing ideas with other students who are interested in student power and how they can be more effective in an educational institution.

The Daily Pennsylvanian, Friday, January 17, 1969

Bennington College will visit Univ. Monday

Three Bennington College coeds who are touring college campuses throughout the country will be at the University on Monday. The women, who are on a three-month tour, will speak on student participation in educational innovations.

The coeds are Becky Mitchell, a junior majoring in political science, and Carole Bolsey, a senior majoring in history. They are interested in sharing ideas with other students who are interested in student power and how they can be more effective in an educational institution.

The Daily Pennsylvanian, Friday, January 17, 1969

The Chevrolet Value Showdown is on.

Ed Stevenson's getting too big for his britches.

We'll put him in his place.

You can bet it'll be the right place, too, because Ed's turning out to be a good engineer. On his way up, it started two summers ago when Ed got his B.S. in Mechanical Engineering from Purdue. He was interested in engine propulsion, so we put him to work.

First he worked in the project group that developed a 1,400 shaft horsepower version of the T-53 gas turbine engine. Then he was a Fan Jet Engine Performance Engineer. Right now he's strapped up in Constant Speed Drives and Ground Support Equipment. And to give you some idea of Ed's dedication to propulsion systems, he spends his evenings at home developing a free-piston engine. Support Equipment. And to give you some idea of Ed's dedication to propulsion systems, he spends his evenings at home developing a free-piston engine.
