P.U.S.H. to start recruitment season

By ARNOLD EISEN

Pennsylvania State University's independent hunters (P.U.S.H.) will begin recruiting for the fall semester this week, according to Russell Parent, vice president of the University, Lila Weidman and Todd Oliphant, president and vice president, respectively.

The recruitment period runs from Monday to Friday and the new members will be accepted through the end of September.

Rae L. Stucky, assistant professor of physical education, said that there were many ways to become involved in the organization. "You can become involved in any way that interests you," she said. "Whether it's through volunteering, participating in events, or just hanging out with the members.""
Letters to the editor

RESEARCH FOR DOD

Most of those present at the October 15th University Assembly demanded a resolution recommending that the University withdraw from Department of Defense research contracts and grants. While many who are doing science overlook some very important points, these points were not brought out in the discussion, we would like to present them here.

The chief reason for opposition seems to have been that the DOD provides funds for harmless, even useful research. We believe that in Department of Defense research contracts and grants. We believe that in any case, we should not support military research.

The results of research are normally civilian-controlled--the DOD will put the results of research to destroy lives. We have no interest in helping the DOD to put its results to use. In any case, we believe that the DOD does not have a right to put its results to use.

There is no legitimate question of presidential executive power in defense plants for young men. There is no legitimate question of presidential executive power in the DOD.

If the University insists to present them here.

The American flag at the top of the

The orange pumpkin, unbesmirched,

The orange pumpkin, unbesmirched,

The orange pumpkin, unbesmirched,

The orange pumpkin, unbesmirched,
Mr. Kuri is a founder of the "kinetic" film movement, which uses images accompanied by soft funereal music to create a sense of "psychological distance."

The first vignette shows a figure-chasing a duck, which then returns to his chair at the end. An explorer and the duck change roles several times, including in the second sequence, in which the explorer becomes the duck. In the third scene, a man runs through the room and turns to face a mirror. He appears to be looking at himself, but the reflection is actually of another object.

The film was one of the first to explore the idea of the "kinetic" film, which uses images accompanied by soft funereal music to create a sense of "psychological distance." This film was part of a larger series of films that explored this idea, and it was one of the first to gain widespread recognition.

The film also features a scene in which a man raises a strange plant and watches it grow. The plant then explodes, creating a sense of "psychological distance." This scene was one of the most memorable moments in the film, and it helped to establish Mr. Kuri's reputation as a pioneer in the "kinetic" film movement.

Overall, "Phenomena" was a groundbreaking film that helped to establish the "kinetic" film movement. It was one of the first films to explore the idea of using images accompanied by soft funereal music to create a sense of "psychological distance," and it was widely recognized as a masterpiece of this genre.

The film was produced in Japan and directed by Mr. Kuri. It was released in 1969 and has since become a classic of the "kinetic" film movement. It has been shown at film festivals around the world and has received numerous awards.
