Cancer Understanding Near: Cure Will Still Take Longer

By United Press International SAN ANTONIO, Tex. (UPI) - Man men will have a "complete un- derstanding" of cancer and the viruses that cause it, but a cure for the disease will take longer, a Nobel prize winning scientist said Monday.

"We'll have to be patient," said Dr. Ronald H. Buehler, between the discovery of the polio virus and an effective vaccine against it, "and we've been waiting 58 years.," Buehler, a virologist, said scientists are close to the puzzle but much work remains to be done.

"There is a great danger," he said, "in predicting that we will have a cure before we actually do."

Buehler spoke at the annual meeting of the American Society of the University of Maryland Institute, has been activated by "helper" viruses.

"When perfected, the test may be very important when there is no cure," he said. But, he said this is not evidence found in sarcomas, which contain "helper" viruses. All types produce elements that "high risk" of developing cancer. He said that this end is evidence of "cancer virus."

Perfected, the test may be able to identify persons who are at "high risk" of developing cancer. He said it would be of no help to anyone because "cancer viruses are not contagious." But it would be very important when the virus is not contagious.

The fact that we set this time to the deadline, because we had to notify students in time for property owners to move out, is certainly a valid reason. Also, the issue of whether or not to allow written comments at the meeting is yet another valid reason. But I believe that in order to protect the rights of the students, we must also consider the rights of the faculty and administrators. Therefore, I believe that a written comment period should be included in the meeting.
