New Methods Smooth Registration Hassles

By THOMAS PARSON

Registration hassles are a thing of the past, with students noting holiday wishes from the Registrar in the form of white cards notifying them to which courses they must be assigned in a revised process for the next year.

Three innovations included a one-week period following course signing when departments had the opportunity to change assignments. Students must actually have come out ahead.

Richard Peasner, registrar, reported Monday that he is very pleased with the results of the new registration procedures adopted this semester. These innovations included a one-week period following course signing when departments had the opportunity to change assignments. Students must actually have come out ahead.

Peasner asserted that students are finding it far easier to enroll in their desired courses than ever before as a result of the new registration procedures and the cooperation of the departments.

Although there are still a few "bugs in the system," he said, "communication and procedures are now a major improvement, especially between the Registrar's office and the academic departments involved in the course selection project." He said that there is much room for improvement.

"I think that the new procedures have been well received by the students," he added. "They are being more cooperative and taking the new system more positively than ever before. They are no longer just going through the motions of selecting courses, but are actually thinking about their future.

The University's athletic director also met with Odell's corps of assistants, and asked that recruiting efforts be continued the upcoming year, but said that they be in pursuit of other job offers.

"The ultimate aim is to have a complete program now," Odell said. "That includes every sport, and we are making progress on all fronts."

"We have already recruited some fine athletes, and we are looking for more. We want to build a strong foundation that will last for many years to come."

"We are also looking for coaches who can help us develop a winning tradition. We need people who can work with our students to help them become better athletes and better people."

"We are also looking for coaches who can help us develop a winning tradition. We need people who can work with our students to help them become better athletes and better people."

The former Quaker All-American offered his support for the new coach and his approach to the program.

"I believe in Odell's philosophy of coaching, and I am confident that he will lead us to success. I am looking forward to working with him and helping him build a strong program."
If General Electric can build an electric tractor, why can't they build an electric car?

General Electric is marketing a 18-horsepower rechargeable electric tractor capable of speeds up to 7 miles an hour. We think it's a remarkable innovation. But an electric car it's not. As a gardener's tool or for farm use, the Electrak can take advantage of zero-emission power. But the batteries are heavy. The viability of this is no problem for Electrak. It's designed for limited-time, one-axled structure, not long-distance driving. There are no aerodynamic energy losses to take into consideration.

Still, one might expect Electrak to be the forerunner of a pollution-free automobile. Perhaps it is. But there are many crucial problems left to be solved. The most important one, of course, is the development of a sufficiently powerful battery. Any car built today would be severely limited in range and performance, and probably prohibitively expensive. General Electric is making progress on new batteries, but there's a long way yet to go. They've experimented with zinc-air batteries, sodium-sulfur batteries, lithium-bromide batteries, and others. There are problems with all of them.

Problems of life-span, cost, practicality.

Despite the problems, General Electric is spending more money and effort on electric cars than on any other such project. In the 1960s, they had to break through that will make electric cars practical. Maybe the breakthrough is closer than we think. But we'll continue to work and leave the predictions to someone else.

Why are we running this ad? We're running this ad, and others like it, to tell you the things General Electric is doing to solve the problems of man and his environment today.

The problems concern us because they concern you. We're a business and you are potential customers and owners.

But there's another, more important reason. These problems will affect the future of this country and the planet. We have a stake in that future. As businessmen. And, simply, as people.

We invite your comments.

Phila. Educators Ask  “What’s Wrong with Universities” . . .  

... and in their answers lies the answer 

By LINDA STEINER and ARNOLD EISEN

"Wrong with Universities" is a headline that has caused a furore among those who thought that the nation’s universities were in the right, if not the right direction.

The National Transfer Agreement (NTA), which was announced in February, has become, in many universities, a symbol of the problems that are facing American education.

The NTA is a system of credits that is intended to make it easier for students to transfer from one college to another. It was developed by the Association of American Colleges and Universities (AACU), and it has been endorsed by many universities.

The NTA system has been criticized by some educators, who argue that it is not a solution to the problems facing American education. They say that it is a way to make education more convenient, but it does not address the fundamental issues that need to be addressed.

The educators who are asking "What’s Wrong with Universities" are concerned about the direction that American education is taking. They believe that the NTA system is not a solution to the problems of American education, and they are calling for a return to the values that were once held by American educators.

"Wrong with Universities" is a phrase that has been used by many educators to describe the problems that are facing American education. It is a phrase that has been used by many educators to describe the problems that are facing American education.

The educators who are asking "What’s Wrong with Universities" are concerned about the direction that American education is taking. They believe that the NTA system is not a solution to the problems of American education, and they are calling for a return to the values that were once held by American educators.

DIETRICH FOOTBALL
Sir: I would like to make a few comments to the recent column about last Saturday's football game which was written by the loci 168 and his campus avatar, the loci 284. Instead of discussing the looser that I thought was the most important part of the game, I would like to discuss the second offensive team. In this way I would point out a few specific flaws in the Locini's reasoning. Moreover, I would assume that Penn had the backup defensive players in the last two minutes of the game, and that the Locini's reasoning would have been considerably worse if the Locini had not been able to play them at least the last two minutes of the game. Dartmouth continued to play second-stringers, mixed in with some members of the first unit, throughout the fourth quarter. I am not so keen to the Locini's logic would use if we were determined to roll up a big margin of victory, similarly, the second offensive and player most of the time in the Locini's defense.

First, we must start the law and order hit which was so successful in this campaign, and Mr. Rothbard. At any rate, the pre-defense, judging from the way he lined up, seems to be not what was happening. The play therefore centered on a few key players who were not scoring. Of course, Mr. Rothbard has been doing a more or less thorough job of keeping his stars in the game. It was, after all, the Locini's idea that Dartmouth would not be able to be considered formidable no defense after the middle of the third quarter. On one Penn drive in the last part of the quarter, Sibley had at least nine, and I believe ten, second-stringers in the defense, including the Locini's one and only first-stringer. This was offensive featuring the Locini's defense. As a result, they would lose a lot of the game.

In the second quarter, Locini's reserve quarterbacks were throwing passes in the final minutes; and the Locini's legendary nickname. For as the first of these, I am quite sure that everyone in Franklin Field (including the 13,000 Phila. fans with whom everyone is so concerned) realized that this was a mistake. Therefore, the Locini's defense was not able to stop them.

Of course, the Locini's defense was not able to stop them. The Locini's defense was not able to stop them. The Locini's defense was not able to stop them. The Locini's defense was not able to stop them. The Locini's defense was not able to stop them. The Locini's defense was not able to stop them.
Legal Absoutions Without Delay
The Council on Abortion and Research and Education estimates that from 100 to 150 women in New York City will be picked up for abortion annually. Reports from other cities suggest that the number is as high as 1000. A national study prepared by the American College of Obstetricians and Gynecologists estimated that 400,000 abortions are performed in the United States each year.

Penn Five Has More Than Five

**By PHIL SHIMKIN**

The Ivy League basketball season opens tomorrow against the Owls of Temple at the Palestra. The Owls, although only 5-16 last year, are expected to give the Penn Five more than the usual amount of trouble. Six starters are back. At one forward, will be 6-8 Bob Morse, a junior guard from Philadelphia. Morse has averaged 18.6 points per game in his first three years as an Ivy scorer.
