
By LEIGH LEVINE

As millions of Americans watched television last night, Nixon's second term domestic goals he hoped for were being whittled away in this week's controversy over education, improved social security and foreign policy programs.

It's a question of whether they'll return, Nixon said, "because so few students have signed up."

A problem for the Health and Society program, and the independent study seminars in the Systems Study program, is that the total time required of each student is 80 to 100 hours for their other courses.

Health and Society Program

"It was considered accepted last spring a number of Nixon plans for second term, reviews new domestic goals.

By ROBERT SARKES

After two days of registrations for the new Health and Society program of the College of Human Studies, the enrollment stood at approximately 60 empty spaces.

Problems in General Honors

By Jonathan Rikoon

As part of an effort to deal with the problems highlighted in this article, the university is considering changes to the Honors program. A student-organized committee, known as the General Honors Council (GHC), has been established to address issues such as the quality of courses, the lack of research opportunities, and the lack of recognition for students who participate.

The GHC was formed in response to student concerns that the Honors program was not adequately serving the needs of its participants. The council has already met with university officials to discuss potential changes, and it plans to continue working with them to improve the program.

In addition to the GHC, a number of other student organizations are also working to address problems within the Honors program. The Penn Student Forum, for example, has held several meetings to discuss the program's shortcomings and has called for changes to be made.

Letters to the editor

What kind of courage does killing take?

In Hebrew Yiddish, there is a saying that goes, "The man who is brave is not the one who does not know what he is doing, but the one who does it anyway." This phrase emphasizes the idea that courage is not just about being fearless, but also about being willing to take action even when it is difficult or scary.

In the context of the Israel-Palestine conflict, the phrase can be seen as relevant. Many people have a strong desire to see justice and peace for all, but are afraid to speak out or take action because of the potential for conflict or backlash. However, the phrase reminds us that true courage is about being willing to stand up for what we believe in, even when it is not easy.

Confronting the corporate monolith

By Doug Richardson

One doesn't have to be a critic to be aware of how much corporate influence has been growing over the past few decades. Corporations are increasingly powerful, and their influence on public affairs is undeniable. Some people believe that this is a good thing, as it allows companies to have a hand in shaping public policy, but others argue that corporate power is too great and that it undermines democracy.

In the context of the Israel-Palestine conflict, there is a similar concern. Palestinian and Israeli leaders, as well as those who support the cause, often feel like they are fighting a losing battle against the power of the corporate world. Some feel that the corporate world is too interested in profit and not enough in justice, while others believe that corporations can be used as a means to help achieve their goals.

In the end, it is up to each individual to decide what kind of courage they are willing to show in the face of this challenge. Some may choose to speak out and take action, while others may choose to support those who are doing so. Whatever the case, it is important to remember that courage is about being willing to stand up for what you believe in, even when it is not easy.
**THE COLLEGE OF THEMATIC STUDIES FOR SPRING 1973**

**AN OPEN MEETING**

* * * * * * * * * * * * * * * * *

Thursday night, November 9th, 7:30 P.M.
Upper East Lounge, Hill House

**THE COLLEGE OF THEMATIC STUDIES (CTS) seeks to provide an unusual educational alternative to Freshmen and Sophomores in all the University's undergraduate divisions. CTS hopes to create a learning environment which enhances the integration of learning and the exchange of ideas between students and faculty and among students themselves.**

To achieve this objective, CTS offers a series of small seminars organized around a number of themes or Topics. CTS: 73 will consist of six Topics: Systems Study, Health and Society, Energy Management, Women's Studies, The Culture of Business and Industry, and Creativity.

**What is Systems Study?**

In a word it is the study of the state of the largest problems confronting society today, problems of pollution and the environment, of technology and its impact on mankind, of world economic patterns, of global population projections, and so on. And one of the most exciting things about Systems Study is that it attempts—without losing sight of the importance of details—to examine these large issues in their largest dimensions. Systems, then, attempts to confront the whole of a problem and not just the parts.

Students and professors will select a series of actual problems involving systems thinking in such areas as law, regional development, health, politics, and economics with a view toward studying them, and, hopefully, solving them.

Specific requirements will vary from Topic to Topic. In general a student who takes part in CTS can expect to pursue three or four credits of work in the program. This permits students to take one or two courses from among the regular University offerings during the Spring '73 semester. Thus, just about all Freshmen and Sophomores, regardless of their school or program, can take part in CTS if they want to. **YOU CAN PARTICIPATE IN ONLY ONE TOPIC, BUT YOU MAY APPLY TO AS MANY AS YOU WISH.**

Distributional credit for any of these courses may be awarded at the discretion of the individual undergraduate faculties.

Students in the courses in The College of Thematic Studies will be graded according to the normal University grading system. Therefore, you will have the same pass/fail option that you have in your undergraduate school.

Students enrolled in this program will be expected to take an introductory course in systems science and technology. This will be followed by a selection, definition, and in depth study of several real systems of interest to the group. Students and faculty will then organize themselves into small work teams to study specific systems problems of their choice. The following diagram shows the arrangement of the proposed program.

**SYSTEMS STUDY is your first, second, third, fourth, fifth, sixth choice of Topic (circle one).**
There is today a growing interest in the political, social, and psychological dimensions of our present system of health care. The CTS program in Health and Society attempts to explore a few of the questions and challenges being raised by physicians, social scientists, lawyers and other professionals, and general citizens who are engaged in the health care area.

The search for alternatives in health care delivery; the emotional and psychological aspects of health and illness; the social and ethical implications of health care and medical practice; the historical and philosophical assumptions underlying medicine and its relationship to society ... these and similar issues will be pursued.

Faculty teaching in the Health and Society program will be drawn from the Dental and Dental Schools, the College of Engineering, the Wharton School, and the Law School. When two or more seminars are addressing similar problems, the students and faculty will meet in a larger group for more comprehensive discussion. In addition, distinguished guest lecturers from on and off-campus will periodically be invited to contribute their views and expertise.

Students who wish to participate in CTS: Health and Society will be expected to register for two (2) seminars and agree to do an independent study for a total of 3 course units.

For more information, contact Steve Batterman at 594-7967 or Jan Hill at 594-7351.

HS001 EXPERIMENTAL SYSTEMS OF HEALTH CARE DELIVERY, John Edlen (Operations Research) Tues. 10-12
Contemporary approaches to the delivery of health care will be examined in the context of a social system perspective, local field work and group action. Research will be the primary mode of learning.

HS002 INTERNATIONAL COMPARISONS OF HEALTH CARE SYSTEMS, William L. Kinsick (Community Medicine) Thurs. 2-4
This course will include a study and critical analysis of the Health Care Systems in Canada, Germany, Peoples' Republic of China, Sweden, Soviet Union, United Kingdom, United States, and Yugoslavia. Analysis will focus on generic similarities between and among the systems and attempt to identify the significant reasons for differences.

HS003 LAW AND MEDICINE, Marshall J. Berger (Law) Mon. 4 - 6
This course will deal with selected legal issues raised by medical practice. Among the issues treated will be abortion, voluntary and involuntary autopsies, experimentation with human beings, organ transplantation and genetic intervention. Some attention may be paid to questions of hospital and physician liability for medical treatment. Students will be introduced to problems concerning the nature and limits of law and will explore legal problems in the medical field.

HS004 ETHICAL AND EXISTENTIAL ISSUES IN CONTEMPORARY MEDICINE, Renee Fox (Sociology) Wed. 10 - 12
This seminar will deal with a number of questions and problems that are of increasing interest and concern both to the medical profession and to the lay public in this stage of modern medicine's development. Problems of causality, uncertainty, meaning, life and death, giving and receiving, social solidarity and of intervention in the human condition will be treated.

HS005 HEALTH CARE DELIVERY, Samuel P. Martin (Community Medicine) Thurs. 1 - 3
The course deals with the problems and issues of delivery of health care. This includes control, financing, quality, and distribution.

HS006 LAW AND MEDICINE, Marshall J. Berger (Law) Mon. 4 - 6
This seminar will deal with a number of questions and problems that are of increasing interest and concern both to the medical profession and to the lay public in this stage of modern medicine's development. Problems of causality, uncertainty, meaning, life and death, giving and receiving, social solidarity and of intervention in the human condition will be treated.

HS007 RESPONSIBLE HUMANITIES, Herman R. Lohis (Pediatrics) Mon. 3:30 - 5:30
This course will deal with two frequent genetic disorders. Sickle Cell Anemia and Down's. 1. A comprehensive discussion of the medical, ethical, and sociologic problems associated with these conditions will be provided. There will be contact with children and families as visits to community facilities. A major point of the medical community's responsibility is dealing with genetic disorder.

HS008 PHILOSOPHIC AND SCIENTIFIC BASIS OF MEDICAL PRACTICE IN HISTORICAL PERSPECTIVE, Howard Rasmussen (Biochemistry) Tues. 4-6
A consideration of the religious, philosophic and scientific tenets underlying the practice of medicine from Egyptian times until the present with a detailed consideration of the implications of the present scientific basis of medicine to the practice of medicine in Western society.

HS009 SOCIAL AND PSYCHOLOGICAL ORIGINS OF DISEASE, Ingrid Waldron (Biology) Mon. 1 - 2:30; Wed. 1 - 2:30
The psychological, social, economic and historic factors that lead to illness or health, and the psychological mechanisms by which these factors have their effect.

HS010 HEALTH PLANNING, Victor Crown (City Planning) Thurs. 10 - 12
The course will examine the general field of health planning, including demographic, social, epidemiologic and political considerations. Arguments for and against coordinated governmental health planning, its goals and organization, will be discussed after an overview of present day medical care in the United States.

HS011 MODERN TECHNOLOGY IN MEDICINE AND HEALTH CARE DELIVERY, David Graves (Chemical Engineering), Steve Batterman (Mechanical Engineering), and others. Wed. 1 - 3
The course will examine some aspects of the role of technology in medicine and health care through a series of seminars which will include topics in Biomechanics, Biochemical Engineering, Design of Artificial Organs, Engineering Approaches to Diagnostic and Treatment of Disease, and Quantitative Analysis of Physiological Phenomena.

HS012 EMOTIONAL STATES AND DISEASE, James L. MATCHOFF (Psychiatry/Neurology) Mon. 2 - 4
The course will explore the way in which changes in different historical periods and in different cultures have related disease and therapy to control or release of emotional behavior. The current state of scientific investigation into the pathological and/or therapeutic effective of emotional states will be reviewed.

2. _

List two alternative seminars in this Topic: 3. _
4. _

HEALTH AND SOCIETY is your first, second, third, fourth, fifth, sixth choice of Topic (circle one).
With the continuing increase in the demands for energy and the difficulties in meeting these demands, the conversion and utilization of energy has become a critical socio-technical problem. In attempting to satisfy the needed energy requirements, the nation will be faced with difficult choices. These choices involve economics, environmental quality, technological home-bases, national security, and resource allocation. In a word, these choices will involve the quality of our national life. In addition to fossil and nuclear fuels, future systems may use solar and geothermal energy sources. These energy sources will be converted into useful forms of power through conventional and new turbo-generators and by direct conversion processes.

Up until recently, our energy usage has been based primarily upon technical and economic performance, with only peripheral attention being paid to the indirect societal burdens. It is now becoming clear that future energy systems will have to be judged with far more respect to environmental impact, safety, and aesthetic values; far more emphasis will be placed upon a broader definition of the common good.

In order to plan, control and operate the energy industry of the future, a new institutional structure with a new set of operating characteristics may be required, which may in turn necessitate the creation of a different set of public regulatory institutions. These new institutional arrangements may involve corollary, retaining and taxing the energy users as a part of an integrated plan.

Educated persons are needed to develop new alternatives. People are needed whose skills are broad enough to participate in articulating the socially significant energy questions which need answers, and sufficiently knowledgeable to contribute to the solution of these problems.

The purpose of CIS: ENERGY MANAGEMENT is to provide an opportunity for students to view the total energy problem in a broad perspective. The learning experience in this program may produce either a concerned citizen who is aware of serious energy problems and will pay heed to those problems in his own career; a person who will continue further education in the area of energy management.

The Proposed Plan

The students who enroll in this topic should commit themselves totally to the energy program for the semester's duration. During the first four weeks of the term students will take “Foundations of Energy Management” (equivalent to one semester's course unit), an introductory course to acquaint the student as rapidly as possible with the totality of the field, and to provide him with the ability to comprehend the language of the field. The course will be team taught by the four faculty responsible for the program.

Following this intensive introduction, all the students will take three concurrent seminars for seven weeks dealing with major areas of energy management. The following seminars will be offered: Society and its Physical Environment, The Economics of Energy, and Energy Utilization Technology.

The culminating activity of our semester's study will be a three week field-study program organized around a specific energy problem. The entire group will travel to Washington, D.C. to meet with congressional representatives and officials from several governmental agencies so as to discuss energy problems with those who legislate, design, and operate the energy facilities. Faculty and students will then proceed to the Tennessee Valley Authority and, hopefully, examine other hydro-electric generators.

The following diagram shows the arrangement of the proposed program.

Foundation of Energy Management
- MITCHELL, M. A., MOSES, R. J., WOLF, M., and ZANDI
This course would explore the interrelationships of the physical sciences, social sciences, engineering and environmental studies in the utilization and management of energy.

Society and Its Physical Environment
- MITCHELL, M. A., and ZANDI
This seminar would explore the interaction between various social organizational forms, the bio-physical environment, and energy utilization. It will teach elements of social scientific problem conceptualization and show its relations to policy information and implementation.

Economics of Energy
- MOSES, R. J., and ZANDI
This seminar is designed to give students an overview of the economic concepts and practices involved in Energy Management.

Energy Utilization Technology
- WOLF, M., and ZANDI
This seminar would explore the principles of energy conversion and utilization. Technological and scientific aspects of energy development will be explored.

News in Brief

McGovern returned to the capital, Agnew if the Vice President should the most he has had in weeks, the telling his supporters that their cause for the presidency in 1976 but the two-hour trip back to Washington, Dakota Queen II. supporters crowded around below. the steps to the airplane and several dozen friends and campaign supporters merged around below. "Nothing was lost last night except a few votes," said McGovern told the well-wishers. "The case is just beginning." The Senator and his family planned to leave Thursday for a Virgin Islands.

McGovern said his state in the presidential balloting. The Senator and his family intended to seek re-election to a third senate term from South Percy, flaunting coattails broader than the one he received in 1968.

"Nothing was lost last night only for the majority of the American people but for the Vietnamese." McGovern told reporters there was no chance he would try again for the White House if he lost this year. "I really mean it," he said.

Campus Crime Statistics

The Daily Pennsylvania will make a weekly statistical summary of crimes committed on the University campus. The crimes, which are reportable to the Pennsylvania State Police, are classified under various categories of index crimes, the most serious offenses, and other. Last week, Mr. Shultis will also provide an "anti-crime tip." The statistics, which are provided by University security director Donald Shultis. are divided Crimes Each week, Mr. Shultis will also provide an "anti-crime tip." Kid's Korner

A Bulldog And His Bone
By Tony Kovatch

There's a rumor circulating in New Haven that Dick Jauron took the four-year-old champion of Yale Bowl, otherwise known as 'Bulldog,' out on a walk after dinner.

"It was a wonderful gesture," said Mrs. Jauron, "because he's always been known as a fan of our school."

"It's a great way to show how much we appreciate our fans," stated the dog's owner, "and it's also a way to promote the game."
