New Procedure Could Expedite Building Repairs

BY ANNET SYLVESTER

The University Buildings and Grounds Department has initiated a new system for processing requests for repairs to student buildings. The new system, per stipulated by the state, will result in a completion of a job at any time of up to two days if the request is sent in a hurry.

Phillips said his office receives approximately 100 requests for repairs each week, and that a certain number of jobs were completed by the university maintenance person within a matter of hours.

Under the new procedure, the deadline for submission of repair requests to the B G office is between 1 and 2 P.M. If a request is not submitted by then, it will be treated as a super priority, bypassing the maintenance person.

The new procedure involves the creation of a system where the repair requests are categorized by type, location, and urgency, allowing for a more efficient distribution of resources.

The University Buildings and Grounds department now has a new system in place for processing repair requests to student buildings. The new system, which was introduced by the state, guarantees a completion of a job by as early as two days if the request is sent in a hurry.

Weather Report Begins the Move Toward a ‘New Musical Language’

BY ERIC LAMAM

Summer of beaver-goose fistic music market dance with pragmatic pictures about the "new music" of Miles Davis came Worship. Spontaneously to Joel Zawinul and Wayne Shorter, two David alumni, the group transformed the narrative style by taking Davis' concepts further toward the development of a more original musical stance that flows through the transplant himself.

Criticized as far Weather Report and for their. Their sound alone in particular, has been constructive, in that it has had the group exploit the "concrete concrete" approach which Davis never fully came to terms with. Working with Macs of sound, they expanded the medium both thematically and rhythmically.

Their latest release, "Bewitched," shows the return of a definite beat to their music, making it a great beat music on the part of many, and permitting listeners to follow the melodies and textures more accurately. Yet they have not lost the ability to hit upon those sounds which seem skills through the nervous system, changing the body electric, as if were "Tango Bougie Waltz," "125th St. Congress," and "Will" illustrate that Worship has not let its experimental edge for many that edge will be far more surprising.

For those of you who plan to see this cooperative musical experience of the lyrically tight lyric performance, I include this almost-worthwhile rubber-dub-dub story for your own protection, which is guided and marked by Weather Report Masses.

Providing them Saturday will be GoodGod, a Philadelphia-based group whose nationally released albums makes a vast appeal in documenting the C. Public programs about the excitement of his heritage. Most of Good God's highpoints are generated by Zeno Sparkles, guitarist, and Greg Scott, pianist, both in performing and composing. Their sound reflects the soul sounds and skills for that Nebula concert at Irvine Auditorium is brought to you available.

Letters to the Editor

University’s First Responsibility Is to Students, Not Merchants

The recent decision to install parking meters along both Walnut and Spruce has strengthened my belief that it is time for the University administration to consider its position with respect to the University community. The seemingly constant recurrence of parking regulations is indicative of the administration’s considerate concern for the interests of business men - merchants of the student body.

The result of this decision seems to be more attention on the part of students, not merchants. Unfortunately, merchants in the area have concerns of their own, which are every bit as important as the students. Parking meters are a real help in this regard.

To bring the present case to point, first, what should be the primary concern of the University’s Office of Planning and Design? This primary concern should center around the utilitarian concern of maximizing utilization between all facets of the community. Further, this concern should be manifested in the central planning of the University’s community resources. Although the parking meters are not the solution of the problem, they do indicate the administration’s concern that the problem should be handled properly. However, there should also be some standards in place wherein the level of success attained in meeting these priorities can be measured.

We are faced in the present situation, with a clear case of the students against the administration and the controversial attempts of the University to rectify the situation.

If there is any community, the success of every component element cannot be measured in terms of dollars and cents. The Burning Carcades Rumored to Be Source of Odorous Nocturnal Hour

I feel that at some point I fail to understand the apparent logic of the University’s budgeting philosophy. It is my understanding that in order to achieve the best possible outcome, the University works to an annual budget which governs all activities of the University. If this is true, then it would seem that it would be unwise at this time to begin to spend any surplus monies on the purchase of a computer form which would be used for the application of parking meters. It has been my understanding that the current budget for the year 1974 is $12 million, and in the November issue of the Bulletin it is reported that $5 million of this year’s budget has been spent on the purchase of parking meters. If this is true, then it is possible that the University is really using the surplus as a way to create the illusion of a deficit in order to create the illusion of a deficit in order to create the illusion of an actual deficit.

The parking problem is a serious one. With the University’s being used for the purpose of the University’s administration and the life of the University, the problem of parking is quite serious. The parking problem is a serious one. With the University’s being used for the purpose of the University’s administration and the life of the University, the problem of parking is quite serious.

SCUE Proposal: Accelerated Introductory Courses

If the University indeed wants to help rectify the problem and rectify the purposes of the University, then the students of the University should be involved in the decision-making process. This is the only way to do it.

The students of the University have no choice but to depend on the University administration for the decision-making process.

Robert A. Reaves

Editor’s note—A Medical School

MICHAEL SANDBERG
Chairman of SCUE

SCUE’s proposal for accelerated introductory courses, which was accepted at the last meeting, is currently being considered by the University administration, although the final decision has not been made. The proposal, which follows, provides two distinct possibilities for the improvement of education at the University. The first possibility involves the establishment of four sections of introductory courses per year, while the second possibility involves the elimination of the introductory courses as a separate subject area. The latter is offered to meet the increased interest of the University in the field of study.

It is suggested that these accelerated introductory courses are more appropriate to certain students and more suitable to the individual learning process. It is also believed that these courses will provide greater opportunities for students to participate in the University’s life. The proposal is presented to the University administration because they are the primary decision-makers and they should put it into effect wherever possible.

The option of giving introductory sequences in each course should also be considered. This option is expected to provide more information and assistance to instructors and will be made for each individual student.

In regard to the practical aspects of selecting these four sections, it is believed that the courses should be designated by the University administration for the completion of the introductory sequence. Each student should be required to enroll in these courses in the sequence recommended by the University administration.

Organization’s Chairman Restates Views on Worthy Victims

Yesterday’s article on grading and the grades of students most in need of my comments was published in the November 21, 1974, issue. The University of Pennsylvania is one of the few institutions in the United States that has made a significant contribution to the study of the University’s history. In my opinion, this study is the most important contribution that has been made to the University’s history. It is also the most significant contribution to the study of the University’s history.

The University’s history is one of the most significant contributions that has been made to the study of the University’s history. It is also the most significant contribution to the study of the University’s history.

Biegel's Clutch Jumper Beats Tigers, 67-65

By ANDY FREDERMAN

It must be history. These were the days when the Princeton Tigers were finally able to put Penn's first in 16 seasons. And they were the days when Princeton's first-ever Ivy League title, its first-ever Eastern Conference title, was still on the line.

The Quakers exploded for four tallies in the final stanza to insure their eighth straight win, and tied the Tigers 5-2. The game was dominated by Princeton, yet Penn managed to pull off an improbable victory.

Bigelow's Clutch Jumper Beats Tigers, 67-65

In the final minute of the game, with the score tied at 67-65, Henry Johnson hit the game-winning shot. The Tigers had been leading for most of the game, but Penn's defense held strong, and the Quakers were able to take the lead in the end.

The team had another reason to be proud of themselves, as they picked up their second straight Ancient Eight title.
