Tonkin Calls for Greater Effort To Upgrade Undergraduate Education

By GLENN WEINBERG

University Vice-Provost Humphrey Tonkin said Thursday that University officials want "to make five demands upon University administrators." 

He described the meeting with university administrators as "a very difficult position to define," and explained that he views his students as "The enemy is not the tuition, but the difficulty in upgrading undergraduate education when there is not a lack of commitment from the students." 

Tonkin expressed concern over the "inflexibility of any one department, the responsibility of any one individual to ultimate satisfactory results." 

These sentiments were echoed by students and faculty at the University at which many University officials were attending last week's symposium on liberal arts education at the University.

“King's Men: Power Lost Between Page and Stage

BY PAUL A. KAPLAN

"All the King's Men," the play won the Pulitzer Prize for drama last year. 

The play tells the story of the career of the fictional governor, Henry Darrell, and his rise to power and subsequent fall. 

The play was written by Robert R. Draper and produced by the University's Department of Dramatics.

U. Computer Museum Proposed for Bicentennial

By CHERI JENNEY

The University's computer heritage is being transformed into a museum, the Bicentennial Commission has announced. 

The plan involves setting up a computer museum in the basement of the library. 

The museum would contain the world's first computer, as well as other significant machines.

Inflation Tide Pushes Tuition Costs Upward

By PETER GINSBERG

The tuition increase announced last week reflects the country's inflationary economy and the University's budgetary constraints. 

The University's tuition is scheduled to increase by 10% next year, and the budget deficit has been added to the original proposal.

In making the tuition announcement, President Meyerson said the increase reflects an inflationary economy and the fact that all sources of University income must share these increasing costs.

A utility bill increase feared to be 10% per cent, according to the President's budget director, John H. Hillebrandt, accounts for a large part of the tuition increase.

The budget deficit of the University is now estimated at $100,000, according to the President, who said that tuition increases would be necessary to keep the University afloat.

The President added that the University would continue to operate at a deficit until the end of the academic year.
**ATTENTION**

**English Students**

English 199 will not be held in the Fall. The course titles appearing on the roster as "English 199" should read "English 189."

**IMPORTANT:** All who register for English 199 should leave Monday at 3:00 p.m. in their schedules. Required lectures will be given at this time for all sections of 199. These lectures will replace the listed meeting time on Monday of each week. On Wednesday and Friday each section will meet at the time listed on the roster.

Alumni Recruiting Network

The Alumni Recruiting Network (ARN) is a cooperative effort between the Alumni Office and the Admissions Office to recruit well-qualified students. The network includes alumni clubs and secondary school guidance offices. The goal is to develop a more comprehensive and effective mechanism for reaching students who might not otherwise be aware of the University.

The ARN has two main components: the Alumni Office and the Admissions Office. The Alumni Office is responsible for maintaining a database of alumni and organizing events to recruit students. The Admissions Office is responsible for evaluating applications and admitting students.

The ARN has been effective in recruiting students from a variety of backgrounds. In the past year, the number of applications from alumni families has increased significantly. According to the director of admissions, this is due to the increased visibility of the University and its programs.

The ARN has also been successful in recruiting students from outside the Northeast. The number of alumni interviews conducted in the last year is over 300, and the number of letters sent is over 1,000.

The ARN has also implemented a new system for tracking alumni interviews. This system has helped to increase the efficiency of the recruitment process.

No Fault' Insurance

By Alan Jacobsen

Within the past several years the nation has experienced a marked change with the acceptance of state "No Fault" laws. No Fault, defined why advocates favor this type of an 1 system which holds the guilty responsible for all damages sustained in accidents involving personal injury. The No Fault concept, as it is often referred to, is very attractive.

In one state which has not adopted "No Fault" yet, the prevailing system is called "Fault Liability." The tort system provides that a negligent person or company is to be held liable for all damages sustained in accidents involving personal injury. According to the "Fault Liability" system, a defendant is liable only if it can be shown that he is at fault. This is a difficult burden to meet, and attorneys have long taken it as a matter of principle to settle as many as possible of these suits out of court.

Under the "Fault Liability" system, injured individuals may be able to recover more in compensation than is available under the "No Fault" system. For example, there is no provision in the "No Fault" system for "pain and suffering" which enables the injured party to recover for emotional distress.

The "No Fault" system offers a number of advantages over the "Fault Liability" system. The most obvious advantage is that there is no longer a need for the injured party to prove negligence in order to recover damages. The injured party simply files a claim with the insurance company of the at-fault party and receives a predetermined amount of compensation.

In addition, the "No Fault" system offers a number of other advantages over the "Fault Liability" system. For example, the "No Fault" system is much more efficient than the "Fault Liability" system.

The "Fault Liability" system is often referred to as the "litigation system" because it is based on the principle of liability. In the "Fault Liability" system, a defendant is liable only if it can be shown that he is at fault. This is a difficult burden to meet, and attorneys have long taken it as a matter of principle to settle as many as possible of these suits out of court.

By its actions in the recent election, the chairman of the Elections Committee was negligent in its guidelines. Hogue favors some sort of legislation that he need only submit to the state legislature to inaugurate "No Fault." As stated, voluminous evidence suggests that the tort system is inadequate and that the state legislature should be asked to consider a bill which would give the legislator the necessary power to make such a change. The reasons I have tried to give objective consideration to this bill relate not only to the general need for more efficient procedures, but also to the need for more effective deterrence for the continued employment of violence.

In essence, I have tried to give objective consideration to this bill on the basis of the facts that I have learned in my capacity as a lawyer, and on the basis of the facts that I have learned in my capacity as a legislator. I have tried to give objective consideration to this bill on the basis of the facts that I have learned in my capacity as a lawyer, and on the basis of the facts that I have learned in my capacity as a legislator.

Aaron Ties Ruth's Record

CINCINNATI (UPI) — Two blocks equalled Uabe Ruth's all-time home run record when he hit the 715th to tie the great slugger for second place in the majors Thursday when he hit the ball with such startling suddenness that it caught the right fielder off balance.

Jack Bullingham and Jack-rabblted Catle of Cincinnati Reds at capacity in the ninth inning, with each striking out as it caught the 715th in the air. The ball fell three feet short of the fence, and Ruth's mammoth blast equalled the record set by Ruth.

The news of the financial pinch, which the hero ahve been suffering for weeks, hit him like a blow to the head. His car was repossessed, and his house was foreclosed. Ruth was forced to sell one of his two homes in the district of the nation in order to raise money to buy a new car.

Mike Tuck: 

"WE'RE NOT PAID TO SIT HERE LIKE PRIMA DONNAS AND READ THE NEWS."

"I grew up in an atmosphere where news was important as food. My father and brothers were all journalists. I did a lot of things along the way - football player, short-order cook, bricklayer - but I always knew that one way or another I was going to end up a newspaper man. A lot of people think reporting news is a cut-and-dried affair. They're wrong. Sure, you've got to stick to the facts. But which facts do you include? A good newspaper will bring out the facts that are most important to understanding the story. And you'll learn something you can use. Either you've got the instinct or you haven't. Either it's in your blood or it isn't."

"On Newsroom we're not prima donnas, we're working people. We're reporters. We dig up our own leads. Do our own leg work. And write most of our stories ourselves. I'll tell you what makes all the difference. Sometimes I'll be talking to somebody, and I'll get the feeling that they really know what's going on. And it turns out that they watch Newsroom. That's when I know I'm doing some good in the world."
**Computers**

(Continued from page 11) Harry Gray, a professor of electrical engineering who edited the book, described the example he remembered programming the machine with.

"It involved setting thousands of symbols and moving heavy things called shift keys around," he said. "It was part of that, that broke a lot.".

Electrical engineering professor Carleton Wiggins said the differential analyzer was built between 1930 and 1932. It was used until 1939, he said, because of slow speed and occasional operation aid demonstrations.

"It was completely mechanical," he explained. "It might as well have been driven by a steam engine."

The Penn tennis team, still battling its way to a first place finish in the Ivy League, will open its season today against Columbia. The Quakers, who opened last year 6-9, are currently 5-2 after Saturday's victory over Brown. The effort is sure to give the Tigers a jolt, and thus the Quakers a chance to finish the season on a positive note.

The Tigers, who opened the season 4-0, were defeated by Princeton and Harvard last week and are currently 4-3. The Quakers, who are coming off a victory over Brown, will be looking to establish themselves as a strong contender in the Ivy League.

The Tiger's victory over Brown last week was their third straight, and they are currently in third place in the Ivy League. The Quakers, who are currently in fourth place, will be looking to build on their recent success.

The game will be played at 2:30 P.M. in front of a capacity crowd. The Quakers are currently 1-3 against Columbia, and they will be looking to even the series.

Penn faces a tough test in the form of the Tigers, who are currently ranked 25th in the nation. The Quakers will be looking to build on their recent success and to establish themselves as a strong contender in the Ivy League.
