New Five-Year Budget Forecast Shows Possible Faculty Cutbacks

By BARRY COLE

With an improvement in its fiscal condition, the University is in a position to take some action toward the goal of increasing academic quality and reducing the size of the faculty.

The University's budget for the next five years would include savings of $13 million, or a 10 to 15 percent decrease from the current level of $233 million, according to Cole.

Cole laid out his plan for the next five years. The plan is based on a model that assumes a decrease in the University's revenue of $4 million per year. The model is designed to give a range of positions that would be available to the University.

The model is based on current enrollment figures and estimates of the growth or drainage of不如 sources of University income determined by the trends of the last five years. It does not include any assumptions about the University's development drive.

The planning model excludes the schools of Business, School of Social Policy and Urban Affairs, and the School of Arts. These schools will be funded in the same way as other schools at the University.

The model is used to estimate the number of faculty members and the number of students that the University will have in the next five years.

By DEBBIE SILVERMAN

The Federal Communications Commission is one of the few regulatory bodies whose decisions are final and not subject to appeal by state or federal courts.

The FCC is responsible for regulating the broadcast and cable television industries, and its decisions have a significant impact on the way these industries operate.

The FCC has come in contact with the rape victim and the defense viewpoint in the Defender I. Auren Curry represented the prosecution by a rape victim and the defense of an accused rapist. The appeals court division, said.

The three local attorneys discussed the problems confronted during the emotional experience of the victim. He must try to calm her down and the doctors and nurses "make the woman's connection to the University." Hobstter said.

Nobel Laureate Schrieffer Delivers Symmetry Lecture

By JOHN RECHER

"The fundamental property of the most profound and useful concepts in physics is the role that they play in the unification of disparate phenomena," said Nobel Laureate John H. Schrieffer in his talk on "The Making and Breaking of Symmetry." Schrieffer, who shared the 1972 Nobel Prize in physics for his contributions toward understanding the properties of superconductivity, explained how symmetry principles underpin the behavior of materials and processes in the physical world.

Schrieffer began his lecture with a discussion of the concept of symmetry, noting that it is a fundamental property of nature. He highlighted the role of symmetry in the unification of disparate phenomena and the importance of understanding the properties of materials that exhibit symmetry.

The lecture was part of a symposium on "Constructive Social Change," which is a series of events organized by the University's Office of Student Life. The symposium aims to promote the development of constructive social change, which involves creating positive social change through education, research, and community engagement.

The lecture was held in the Student Center auditorium and was attended by approximately 300 students and faculty members. The event was part of the university's ongoing efforts to foster a culture of social responsibility and engagement, and to encourage students to think critically about the role of their education in creating positive change in the world.

"The lecture was a powerful reminder of the importance of understanding the role of symmetry in the unification of disparate phenomena," said one student in attendance. "It was inspiring to hear about the fundamental role that symmetry plays in the physical world and to think about how we can apply these principles to create positive social change."
CARTER HOLDS NEWS CONFERENCE—Jimmy Carter said yesterday he deported proceedings yesterday against three immigrants it said took part in Nazi atrocities against Jews during World War II. Two of the defendants said they were innocent and that they were sentenced under a third had his hearing postponed.

Taking the "Liberal" Out of "Liberal Arts"

By Mac Tadic

President of the Undergraduate Senate, Mac Tadic's statement, shortly after last Wednesday's Undergraduate Senate (US) meeting, made all 12 US members aware of a great threat to the university community. The new threat came from a contradiction in the proposals of the Division of Academic Services (DAS) and Student Affairs Services (SAS).

The University Council's recommendation stated that the most viable plan for solving the academic regulations problem is the development of a cluster system, which would entail the restructuring of the university's academic calendar, the restructuring of the university's academic calendar, and the restructuring of the university's academic calendar.

The cluster system was developed by the President and his team of advisors. The President's team of advisors included the following individuals: Mac Tadic, the President; Dr. William April, the Director of Academic Services; and Dr. John Smith, the Director of Student Affairs Services.

The cluster system was designed to address the following concerns:

1. The academic calendar was too long and too fragmented, making it difficult for students to complete their degree requirements.
2. The academic calendar was too rigid, making it difficult for students to take courses that they needed to complete their degree requirements.
3. The academic calendar was too expensive, making it difficult for students to complete their degree requirements.

The cluster system was designed to address these concerns by restructuring the academic calendar into a series of clusters, each lasting for a specific period of time. These clusters would be designed to allow students to complete their degree requirements in a shorter amount of time, while also allowing them to take courses that they needed to complete their degree requirements.

The cluster system was designed to be implemented in three phases, with each phase lasting for one year. In the first phase, the cluster system would be implemented for the 12 US members, allowing them to complete their degree requirements in a shorter amount of time. In the second phase, the cluster system would be implemented for all US members, allowing them to complete their degree requirements in a shorter amount of time. In the third phase, the cluster system would be implemented for all students in the university, allowing them to complete their degree requirements in a shorter amount of time.

The cluster system was designed to be implemented in the following manner:

1. In the first phase, the 12 US members would be allowed to take courses that they needed to complete their degree requirements.
2. In the second phase, all US members would be allowed to take courses that they needed to complete their degree requirements.
3. In the third phase, all students in the university would be allowed to take courses that they needed to complete their degree requirements.

Legal Viewpoints of Rape

Legal viewpoints of rape have been under serious consideration recently in order to provide a more effective means of combating a victim's reluctance to report the rape. The reason for this is the common fear that a rape victim does not want to report the rape for fear of being stigmatized. The victim of rape is more stigmatic than the victim of any other crime. Having to talk about prior sex conduct is like asking a woman to describe the crime of statutory rape.

The courts have responded to this problem by allowing victims of rape to be assisted by attorneys and social workers who can work with them to make it easier for them to report the rape. Some states have also passed laws that allow rape victims to testify at the trial of a defendant without being cross-examined about their prior sex conduct. This has helped to reduce the stigma associated with rape.

However, the legal system still has a long way to go in order to provide effective legal protection for rape victims. More resources need to be allocated to legal aid organizations to help rape victims who cannot afford to hire attorneys. Additionally, more research is needed to better understand the psychological effects of rape and how to provide better support for victims.

The treatment of rape victims should be more sensitive and considerate, and legal viewpoints of rape must be changed in order to provide better protection for victims of this terrible crime.

Grid Quintet Waits... While Pros Scout

By JOEL GODBERG

Professional football.

It is Denver, Kansas City, Buffalo or Green Bay, amid grid fans brave the frigid temperatures and brisk winds to watch the pros up close. The excitement of watching a game like this gives me an op- ponent that can detect the most subtle differences and variations in performance that occur from game to game.

In Mazzetti's case, the pros are looking for consistency. With the new kicking rules, the field goal attempt may be called or even the kickoff returned for a score. The kickers must be able to handle these situations and still show their best form. It is essential that the kicking unit be consistent throughout the season.

On the other hand, we have underclass guard Bill Peterson, who was probably the key to a defensive line that was outstanding in the final few minutes. Bill's emergence was critical, and he showed great potential. In fact, when he returned to the game after being injured, the defense seemed to come alive.

"With my eye I have to be careful on the move and force the ball out if I can," said the coach. "If I can't get the ball, I'll throw it away or force the kick."

Be it in Denver, Kansas City, Buffalo or Green Bay, avid grid fans brave the cold to watch the pros in action. The excitement of watching a game like this gives me an opportunity to learn from the best and to compare myself with them. It is essential that I maintain a consistent level of play throughout the season.

"I'm just trying to get out there and do my best," said Bill Peterson. "I'm not really thinking about the big games. I just want to do my best and help the team win."
