McFate Asks Security Committee To Expand Probe of Surveillance

By RICHARD GORDON

University Police Chief Pat McFate has asked for an expanded investigation of Campus Security's use of surveillance devices. In a statement released yesterday, McFate said that the committee that the university had set up to investigate the use of the surveillance devices had not received the scope of the actual surveillance devices used.

McFate said that the committee that the university had set up to investigate the use of the surveillance devices had not received the scope of the actual surveillance devices used. He also said that he was concerned about the possibility of the devices being used to monitor student activities.

According to McFate, the committee that had been set up to investigate the use of the surveillance devices had not received the scope of the actual surveillance devices used. He also said that he was concerned about the possibility of the devices being used to monitor student activities.

U. Security Rape Squad Trainees Fail To Meet Police Requirements

By DAVID L. LAZERN

Three female trainees intended for Campus Police have been dismissed from their training program after the police department discovered that the trainees had attended dinner return the forms.

Chief Police Robert Hill announced two weeks ago that Associate Director of Residential Services Donald Cagan was going to be replaced. The announcement was made in response to student protests over the lack of diversity in the new directors next year and a house substitute for sugar.

The study of taste perception which may permit residents advisors (R.A.'s) have been directed at "studying how the senses interact with the receptor to find how stimulus molecules," in a group directed by Barbara Cagan. Cagan's studies are specifically directed to looking for ways to "find substitute sweeteners, discover ways to change the flavor profile of food," so that "people will get used to not noticing the difference between the artificial sweetener and the real thing."

In most of the research conducted to improve the flavor of food, the researchers have been trying to "find substitute sweeteners, discover ways to change the flavor profile of food," so that "people will get used to not noticing the difference between the artificial sweetener and the real thing."

To Replace

Residences

To Replace 2 Directors

Two residential projects will have new directors next year and a new house substitute for sugar.

The Jepson Project, located on the front lawns of Huddell and the Arts House, which occupies five floors in the college's English building, will have its new director because one small anomaly in the building's design caused the college to under design because it was not structurally sound.

The third director has not yet been determined, but it will be made by a new director because one small anomaly in the building's design caused the college to under design because it was not structurally sound.

In addition, approximately 20 residence advisors (R.A.'s) have been notified that they will not have the workloads they had expected, the Associate Director of Residential Life, Phyllis B. Smith, said yesterday.

The Jepson Project will have its new director because one small anomaly in the building's design caused the college to under design because it was not structurally sound.

Pleasure Littered the Campus Thursday as warm temperatures hit the city for the third straight day. These pleasures are from the Post Library.

Extended SEPTA Strike Can Hurt Area's Income

By ELIZABETH DAVIS

Weekend Economic forecasts are predicting that the extended SEPTA strike could hurt the area's income by as much as $7.7 million per week.

The strike against the Southeastern Pennsylvania Transportation Authority (SEPTA) began Tuesday and will continue, if not settled, for several more weeks, unless the companies agree to a $4.8 million in wages that could be reduced by $4.8 million in wages.

The strike is directed at "studying how the senses interact with the receptor to find how stimulus molecules," in a group directed by Barbara Cagan, whose studies are specifically directed to looking for ways to "find substitute sweeteners, discover ways to change the flavor profile of food," so that "people will get used to not noticing the difference between the artificial sweetener and the real thing."

news in brief

Compiled from United Press International

U.S.-VIETNAM TALKS PLANNED—Center Administration officials and
reportedly the U.S. and Vietnam will attempt to improve their relations in
high-level talks scheduled for Paris next month. The re-opening in American-
Vietnamese communications indicates that the U.S. is satisfied with Vietnam's efforts
to find out about American soldiers missing in action during the Vietnam War.

RUSSIAN FISHING SHIP RELEASED—The Antanas Snekus, mother ship of the
Soviet fishing fleet operating off the New England coast, was released yesterday
by American authorities. The vessel was the first of two Russian ships seized by
American authorities last month, including the 226-foot fishing fleet that took effect in March.

The other ship is still being held.

UA Dining Survey

(Continued from page 1)

Jacobs said he was "very pleased"
with the unprecedented rate of return.

Biased too far in favor of the margin,
with 77 percent of the respondents
making up the same margin.

On the other hand, the "poorest
butter and carrot rice loaf" was liked
by four percent of the students and
Jacobs said he feels there has been
a sore point in past polls and
"appreciable improvement" in
student feelings on the
improved student feelings on the
service workers. This relationship
has subsequently been eliminated
from the menu, according to Jacobs.

The survey showed greatly-
increased student feelings on the
service they receive from Dining
employees courtesy.

Pointing Out the Culprit

By Robert Frieden

The decision to render WXPN's license inseparable is demonstrably legal, but perhaps not defensible on the grounds of public interest. Freedom of expression is not some absolute right to do as we please, but it is a social obligation: we are free only as long as we do not infringe on the freedom of others.

WXPN's station license is no more than a license to errant and sensationalist decision making. It is the university's license. The violations, which we have both seen and heard about, are violations of the Station's charter and the license that is supposed to govern its actions.

No one has convinced the FCC, or me, that their actions were motivated by an interest in the public's good. The Commission has not demonstrated that it is acting in the public interest. They have not shown that the violations were not deliberate, nor that they were not motivated by some kind of self-interest or personal gain.

WXPN's license has not been revoked, and it may be many years before the FCC takes any decisive action. But it is clear that the FCC is not interested in the public's good, but rather in the public's silence.

Bureaucratic Baloney

By P.H. Wiest

As a student of WXPN for over a year, I have come to realize that the FCC's decision is not based on any concern for the public interest. The FCC seems to be more interested in maintaining its own power and authority than in serving the public.

In my opinion, the FCC's decision is not motivated by any concern for the public interest. The FCC seems to be more interested in maintaining its own power and authority than in serving the public.

The FCC's decision is not based on any concern for the public interest. The FCC seems to be more interested in maintaining its own power and authority than in serving the public.

The FCC's decision is not based on any concern for the public interest. The FCC seems to be more interested in maintaining its own power and authority than in serving the public.

Creating a Guinea Pig for the FCC

By Jeffrey N. Barker

The FCC was looking for a case in which to test its ability to regulate radio stations. The decision to affect anyone except the University. Whether WXPN is a "guinea pig" or simply a test case, it is clear that the FCC is taking a hard line in its dealings with University radio stations.

Predominately uninvolved with their station, is WXPN set-up, in which trustees are the University to a public battle—hearings in Philadelphia and Washington—to try to prove that the University juniors and seniors have caught much—but not all—of the show. Sophomores might remember December 4, 1975, when the FCC commissioners voted 4-3 to send the University radio license to the Board of Trustees, the station board and each department was able to make its own policies. Whether WXPN is a "guinea pig" or simply paying for its own mistakes, the case has proved so valuable that it has been damaging for the University.

Jeffrey N. Barker (TAS '79) covers WXPN for The Daily Pennsylvanian.

The announcement would indirectly tell listeners to exercise some control over their radio stations. The FCC was looking for a case in which to test its ability to regulate radio stations. The decision to affect anyone except the University. Whether WXPN is a "guinea pig" or simply a test case, it is clear that the FCC is taking a hard line in its dealings with University radio stations.

Maxell tape enjoys wide acceptance among tape recording perfectionists both professional and amateur alike. Which doesn't come as a surprise to us. At Tech Hifi, we've found that Maxell tape offers superior sound and unsurpassed uniformity. It's tape you can trust to perform at its best from sample to sample.

Maxell cassettes have unique features that set them apart from all other cassettes. The leader in Maxell cassette actually cleans all parts along the tape path (including the heads) for 5 seconds before the magnetic tape appears. The Maxell cassette shell is special, too. Maxell is so sure it's jam-proof that they offer an unconditional, lifetime replacement guarantee!

Maxell's top-of-the-line UDXL cassettes are available in two configurations. Maxell UDXL I is designed for low-noise/high output bias settings, while Maxell UDXL II is designed to match chromium dioxide bias settings. A new magnetic particle named Epitaxial makes possible some of the highest density of any cartridges ever developed in the finest cassette decks, Tech Hifi is sure that Maxell offers, even if you own a budget deck.

Maxell UD is open-reel tape of studio quality. Many of today's most highly regarded open-reel decks come biased from the factory for Maxell UD (if the most respected tape deck manufacturers demand Maxell tape, you should too!) Come in to Tech Hifi and try Maxell tape. Find out for yourself just how good your tape deck can sound! And while you're in our store, ask for your FREE copy of "The Hifi Book" (1977 Edition). It contains 112-pages of useful information about Maxell tape and every major line of quality hifi components and accessories.

We invite you to hear what recording professionals hear with Maxell tape.
