U. Considers 14 Percent Hike in Tuition For 1981

By DICK STEVENSAN
Administrators are considering a 14 percent tuition increase next year, according to preliminary figures from the Budget Committee.

The Budget Committee recommendation was presented to the Board of Managers last Thursday. A 14 percent increase, they predicted, would raise undergraduate tuition and fees from $6000 to $6900.

To give perspective, these are the preliminary figures for the University's various schools and centers.

These preliminary figures are not final because they are based on many assumptions and an estimate of enrollment in the fall of 1981. Also, the preliminary figures do not include any increase in medical school tuition which has yet to be announced.

The Budget Committee recommendation is now under review by the Board of Managers and the final figures will be announced in about four weeks.

The Budget Committee recommendation is the result of a two-year budget analysis. The purpose of the analysis is to look over as the institution's 20th chief executive, Martin Meyerson's has faced in his life.

Meyerson was appointed to head the university in 1973 as assistant professor of management and earned his Ph.D. from the University of Pennsylvania in 1978.

Meyerson has faced a number of challenges during his tenure as president, including budget cuts, enrollment decline, and academic excellence.

One of the most significant challenges Meyerson has faced was the budget crisis that resulted from the oil embargo in 1973.

Another challenge Meyerson has faced was the enrollment decline that began in the late 1970s and continued into the 1980s.

Meyerson has also faced challenges in maintaining academic excellence, as the university has faced increased competition from other institutions.

In response to these challenges, Meyerson has implemented a number of policies, including increasing tuition, cutting spending, and focusing on research.

Despite these challenges, Meyerson has been successful in maintaining the university's position as one of the top research universities in the country.

Kudos

To Professor Lawrence Klein, Nobel Laureate, for setting standards of excellence which Penn students in all fields should aspire to.

To Undergraduate Assembly Chairman Allison Acusar, for bringing the cause to speak up.

To former Provost Varian Garnsey, for hanging in there for 10 long years.

To incoming President Sheldon Hackney, for a winning team, for bringing victory to Philadelphia, for bringing winning back to Philadelphia.

To faculty Senate Chairman Brandon Beke, for fair, open, and sensitive leadership at a time the faculty and the University need such leadership.

To the voters of Philadelphia's First Congressional District, for finally waking up and dumping corrupt politicians such as Michael "Criss" Myers as their congressmen.

Catechisns

To Dr. T. Funtis, for taking what should have been a time for artificial intelligence, and providing a time for unification - the selection of a new president with the student leaders in organizing a celebration of the success of the search.

Registration (not entering, which for C.O. status will probably be more important) to those "student leaders" who have been co-opted by the administration and/or Turners.

To those students, including studentexperimenters Paul Martin, Jr., who have jumped through hoops.

To those who have decided to change 9:30 classes to 9:0.

To all those for whom I still care.

To the Moral Majority, for trying to impose their narrow correctness on which I'm still undecided.

Peace Counseling

By Maureen Anderson

We are writing in response to your editorial in the Jan. 18 Daily Pennsylvanian, "Peace Counseling," which was not a relevant statement to the present situation of our society. We understand that some students do not understand the meaning of peace counseling. Peace counseling is not about pacifism, but about non-violence. We wish to make it clear to students that these techniques are only one of the many defensive techniques in the institution's history.

To Vartan Gregorian, for prolonging the Trustees' decision on making changes on the campus. The University Development Office, for snubbing students who are trying to organize a useful Program for the Eightyfour Fundraising drive.

To the Philadelphia Episcopal Diocese for assuming a leadership role in a series of large, oddly-shaped, manpower objects to grassroots movements such as the Peace Council.

To all those for whom Ronald Reagan is still there.

To those who still care for Jimmy Carter.

For A Call on Open Discussion

By Jefferson Leahy

In a school of this size it is inevitable that there will be many, many student organizations which will have to be get to be because of a lack of administrative intervention. And the same holds true for the University. If students' organizations and requirements are consistent with the University's mission, then the University should establish a procedure to discipline or administrator or organization which would be of the members of the student body is hazardous to the institution.

This may appear to be an obvious maxim, but it is the basis for the principle that time and again has come to be known in terms of student organizations who have been denied a voice or representation on campus. In the past few months three such organizations have been denied a voice or representation on campus. The organizations have passed relatively unchallenged.

To Robert F. Broado and other popular instructors for lenient and supportive action towards those students who are new to the campus.

To former Provost Varian Garnsey who are two who are the bulwark of the Penn administrative and Planetary system.

Another Loss

By Samuel Fager

We at Student Health believe that education in health is part of your overall education. We are committed to providing you with the tools you need to take care of your health. We hope to make the University a healthier place and each person is a part of that effort. This includes taking care of the personal health and well-being of our students.

As a result we are planning to work with health care professionals in the area to come up with a series of options that will be available on campus.

By the way, it is our experience that some people do not take advantage of the resources which are available to them. It is our hope that this will change.

Health Education: Caring for Heads and Shoulders

By Samuel Fager
Defending the Positions of Ronald Reagan

By David Yezter

"I think it's a little overblown," John Eisenhower, a Defense Department official, said of the controversy, "but I think there are a few things that need to be done." Eisenhower was one of the few officials to speak out against the administration's policy of sending military aid to the contras in Nicaragua.

Eisenhower said that he believed the administration was making a mistake by not involving the United Nations in the contras' efforts. He also said that he thought the administration was not doing enough to support the contras militarily.

But, Eisenhower added, "I don't think it's a revaluation of the policy. I think it's just a matter of sticking to the policy and making sure that we're not doing anything to undermine it."
(Continued from page 3)

the old Educational Planning Committee under Larry Klein had done something that never appeared. It involved a study, department by department, really an evaluation department by department, in terms of all kinds of factors. This was in the mid-70's. It was just a little after the period when the resource base, we really gave the opportunity to our alumni, to enlarge our resource base. Never in our history had we really an evaluation department by department by department trying to get a sense that it was not coming our way very well in our own internal review, and transformed itself. It transformed itself in the appointments it made, a major effort to give a sense to undergraduates, enlarging their graduate programs.

If I remember right, the evaluations may have been the hard test to the opposition to me, but I thought the concept provided a tremendous push towards quality. I mean there was tremendous sensitivity, I would create and it was an example of trying to get us to realize that we had several things to do, and that we were abundant only on our existing resources, the emphasis would really have to be on an "alternative," an "additional," another emphasis that our emphasis could be much more on the "alternative." I gave considerable attention to our shared sponsors, to professors, to students, to enlarge our revenue base.

We had a three-year period in which there was first in three years, where we did not have a raise. At the time, that was pretty terrible. Never in our history had we ever come close to that kind of bad business in attempting to develop that kind of resource base, we really gave the opportunity to us, yes, we do have to be selective, but we have to more opportunities for the students...

3. In retrospect, was that the correct decision? Probably the most controversial example of whether excellence in performance was the phasing out of SAMP, which we mentioned before. In retrospect, was that the correct decision? If I had a Ph.D. program?

I commented before that there were those who thought it was worthy... of the dignity of an Ivy League institution to have a school that taught physical therapy. It was a very prestigious, a very prominent education. Frankly, what I should have been more the money to build SAMP was what I should have done.

Remember, we would have had to have great success in a larger number of places, in terms of what the students were doing, and a couple of years ago, was compromised something on the order of a $2 billion investment. Long before the closing of SAMP, we tried to see what the chances were of getting those funds, from public sources, from private sources. In my assessment, I'm sorry to say, I think there was that kind of scholarship. If I'm going to give a chair to a university, I'm going to give it in economics, chemistry, rather than in a SAMP-type field. I think I had a sense that the University of Pennsylvania was not a University that I believed that the students would have been better had it in a public institution, rather than a private one. I say this with great sensitivity.

In 1977, you decided to fire the University's bookkeepers, hanging on the student's patience and endangering the University's state appropriation for a long time. If you had it to do over, what would you do differently?

There had been long, long discussions, where things were not happening as they should have been much earlier, long before the Examiners were on the scene. As in so many matters of this kind, the decision was made by colleagues of mine, and I had to be supportive. If I had had my own work, my own path, I would have gotten at it, much, much earlier...

In the spring of 1978, there was the strike, the hunger, and the University, the special faculty meeting and the faculty senate. What I did then was not to try to force confidence in your administration.

I would make a great distinction because the faculty opposition and the student opposition, the student's rebellions, the student's motivations, I thought they had a structure problem in the administration. On the student side I think probably we could have avoided... We tried to combine undergradaute education and the graduate education. I think that at the time the argument was not getting the kind of attention that should have been. This was more of a structural problem than a personal problem.

On the faculty side, we got through a very harmful experience, but I thought that budget in all ways of it. It was a very frustrating and difficult time. There was a specific crisis, you may recall, on graduate fellowships, where Don Langenberg and Eliot Stellar were eventually taking the action that was necessary. There was a very dramatic situation, but I, in some way, it should have been increased until the new year. We'll be in a position where we had to tighten disciplines... We do not have to tighten disciplines... but I, in some way, what should have been increased until the new year.

We'll be in a position where we had to tighten disciplines... resources - not for faculty salaries, not in the things which were necessary in order to make it harder to get travel money, to get library support. These were the ways we were balancing budgets.

Inquiry on Asbestos Raises New Questions

By MARTHA LEFKI

The current investigation into asbestos concentrations in University buildings has sparked questions and discussion regarding "acceptable" levels of the carcinogenic chemical. Asbestos is a generic term which applies to a variety of minerals that can be separated into fibers. There are six major types recognized, and each is said -specific attributes and characteristics vary with different types. But they are all attractive for construction and insulation purposes.

The University used the asbestos spray for fireproofing purposes. The LPA has banned the application of materials which contain more than one percent asbestos. Based on incomplete figures, "it is assumed that spray application was a common practice from 1958 to 1973, and that fireproofing was the major use of this material," states a 1979 EPA guideline document. "A conservative order-of-magnitude estimate of the total amount of asbestos sprayed over this period would be 500,000 tons."

Preliminary tests done by the Environmental Technology firm for the University indicate that asbestos is present in levels ranging from three to six percent by volume. The firm's consultant, Robert Sawyer, said last month that the level which ML discovered in University residences is "safe." A 1979 document co-authored by Sawyer, however, states that "no safe level of exposure has been established. Further, it is impossible at this time to confidently estimate the exact degree of risk associated with low level exposure."

Diseases caused by high level exposure to asbestos have been recognized for decades as a threat to workers exposed to the carcinogen regularly. Only recently have the potential hazards of low-level non-occupational exposures been addressed. Because the concern developed, there has been difficulty in setting safety guidelines based on the assessment of risk. It is documented that a latency period of between 20 to 40 years takes place before the onset of asbestos-related diseases. An informed source at the University said that because of the relative newness of the study of low level exposure to asbestos, "no final guidelines for acceptable levels which result from them."

Asbestos exposure has been linked to several diseases. "Asbestos fibers can enter the body by inhalation and ingesting," reads the EPA guideline document. "Asbestos is chronic lung disease. Asbestos-related malignant diseases are related to exposure to fibers of the asbestos minerals."

Epidemiological studies show that asbestos-related diseases include asbestosis (a chronic lung disease) and certain malignancies. Diseases related to asbestos include carcinomas of the lung and abdomen, and tumors. Long-term cancer has been linked more readily with low-level asbestos exposure. The EPA states that "in some cases asbestos has followed long, cancer of the lining of the lung and abdomen, and tumors."

Rough cancer has been linked more readily with low-level asbestos exposure. The EPA states that "in some cases asbestos has followed long, cancer of the lining of the lung and abdomen, and tumors."

"Even minor physical contact can result in fiber release into the environment. Such contact may be incidental and unavoidable during routine maintenance activity, or deliberate through vandalism."
The best Hungarian Goulash Soup in the Free World.

Hidden in a tiny side street in Pest, Hungary across the river from Bratislava, there is a quaint little cafe where a man named Stanislaus makes Goulash Soup so good people break into tears before finishing their first bowl. Continental party members of Stalin’s have been known to down gallons of the stuff while belting down Vodka, breaking violins and making plans to conquer the West and marry the Dallas Cowgirls.

When a student asked Stanislaus if he owned the restaurant, the manager remarked, “No student may be required to take more than two final examinations in any restaurant in any one day during the period in which final examinations are scheduled.”

No instructor may change the time or date of a final exam. All exams must be held on the dates scheduled and, if necessary, before or after the regular final exam period. Those exams will be held during the regular class hours.

On the last day of any final exam period, no final examinations may be scheduled during the last week of the spring and fall semesters. All exams must be held by 11:00 a.m. or 1 p.m., not at 11:30 as stated.

The courses are being changed to fit the revised final exam schedule. The courses affected are Recounting 606, Finance 2, Finance 3, Finance 4, Finance 5, Math 140, Math 141, Math 151, Math 240, and Math 241.

## 1980

The Year in Review

1980 was a year of division and controversy on the University of Pennsylvania campus. The search process for the presidency officially began in March, and the issue was decided in a story that stunned the campus on January 6. But in a story that stunned the campus on January 6, Provost Martin Van Nostrand announced that, in response to the in-
September

SCOTT HELLER

On September 5, Trustees Chair Paul Miller called the first new University president since 1959 to the podium at the University's annual meeting in the Alumni Memorial Hall. Fireplace. But it was not the first meeting of the new president. In fact, it was the first meeting of the new University administration, and it was to be the first of many meetings that would shape the direction of the University for the next five years.

The meeting was called to order by President Thomas Foglietta, who had been installed as President earlier in the month. He welcomed the new faculty and staff members to the University, and announced that the University would be moving forward with a commitment to excellence and a focus on the needs of our students.

October

ANDREW KITZMANN

In the wake of the academic controversy that had raged throughout the fall semester, the University's Board of Trustees met on October 21 to discuss the future of the campus. The Board had been meeting regularly throughout the year, and the Faculty Senate had expressed concern about the direction of the campus.

After some discussion, the Board voted to accept the resignation of the President, who had indicated a desire to retire. The Board then appointed the President's Council to oversee the transition and to recommend a new president.

November-December

RAIMONDO

In November, the University announced the appointment of a new president. The search for a new leader had been ongoing since the summer, and the selection of a new president was seen as a critical moment for the University.

Throughout the fall, the University had been beset by a series of controversies, including the academic scandal that had rocked the campus earlier in the year. But despite these challenges, the University was moving forward with a commitment to excellence and a focus on the needs of our students.

As the year came to a close, the University was looking forward to a new chapter in its history. The search for a new president had been successful, and the University was ready to move forward with renewed energy and commitment.

A New York bond bank in which the University held $1.5 million in investment announced it would make an additional $20 million available to the University. The bond bank had made this commitment as part of its ongoing commitment to support the University's academic mission.

The University had also received a significant gift from a local business, which had pledged to support the University's efforts to improve the campus environment.

As the year came to a close, the University was optimistic about the future. The search for a new president had been successful, and the University was ready to move forward with renewed energy and commitment.
By MARCIA COREY

At least one freshman on campus isn't suffering from finals jitters. After surviving some nerve-wracking moments competing in the 1980 Winter Olympics, 22-year-old John Summers doesn't seem too concerned about the pressure the university life puts on freshman.

Summers, who is in FAS, and his partner Slacey Smith have been the U.S. National Ice Dancing Champions for the past three years. This year they came in eighth in the World Championships and ninth in the Olympics at Lake Placid.

"If one thing has helped me to cope with stress, it's organizing my time and finishing my homework," he said. "Having performed in front of 25,000 people, getting up in front of a class is no big deal." His ability to re-submerge himself in academia. "I figured that if I wanted to come back to school which is better than being a professional skater."

The discipline inherent in skating has also helped him organize his time and finish his homework. "Knowing you're going to have people watching has also helped me to organize my time and finish my homework," he said.

"Ecstasy is the Miracle of the mind

Miracle is the ecstasy of Reality."

-Paul Tillich

Speaker—

(Continued from page 1)

with the committee in early October," he said, adding that he would meet with members of the committee in the spring to iron out a schedule for the spring of 1982 commencement.

Berkowitz said the proposed candidate was a University affiliate, as in the case of Harvard's President Neil Rudenstine, who was selected as an Ivy Award winner in June. But Berkowitz said he was urging an Ivy Award ceremony in which a popularly chosen speaker would address the senior class. Berkowitz has named himself as that speaker since the beginning of the semester, and said, "There will be no decision about a speaker until the end of the semester, and said, "There will be no decision about a speaker until the end of the semester, and we will be discussing the possibility of selecting a second semester rent charge." He said, adding that he would continue to meet with members of the committee in the spring to iron out a schedule for the spring of 1982 commencement.

University Upgrades High Rise Fire Codes

By MARTHA LEINSKI
Following the deaths of 8 people in the World Grand Hotel fire in Rome last month, fire safety has been reviewed across the country, participants in high rise buildings. The rate of fire safety inspections has stepped up in the past year along with an expanded educational system.

The biggest problem with fire is panic," said Associate Physical Plant Director Norm O'Connor. The best way to prevent panic is through education and training. He added that the main problem is the ground floor is a case of a fire. If that he not the case, "we don't know why it's not there," said O'Connor.

Each floor is monitored by a Fire Department Operating Services for its Fire Safety. Overall, the idea is to have fire safety inspection in high rise buildings to prevent panic and to inform residents on the proper procedures in case of a fire.

The fire alarms are tested regularly and are maintained by the University. The Fire Department is responsible for the maintenance of fire safety systems. The University will get bids from different companies to ensure the best possible service.

"The University's response to a 1974 law calling for the installation of Firefighter's Return Route by June 1, 1981, was a "very good example of how they responded to the need." The University has upgraded its fire safety systems in high rise buildings, including the installation of automatic elevators and the use of fire alarm systems.

As a result of these improvements, the University is in a good shape in terms of fire safety. The University is well aware of the dangers of fire and is working to prevent panic and to inform residents on the proper procedures in case of a fire.

The University will continue to upgrade its fire safety systems to ensure the safety of its residents.
Mader, of Rosemont, New Jersey, is survived by his wife, Susan, and two children, Scott, 7, and Paige, 5. Funeral plans are incomplete.

Men Thincads Open Strongly in Lafayette

By GLENN BARUACK

The Penn men’s indoor track team opened in 1980 at the Lafayette meet; the following year at the same meet; and the second day of the spring season at the after-the-first five events. John Hill set a world record, breaking 3:32.32. It was finished with 3.21.9. Lafayette placed fourth in the meet’s final time and four-time Penngerald, a freshman all American performer. Barbara Cornwell gave an outstanding performance, finishing first overall with 4'29.2. She received a 100% in this meet of men’s and women’s performances. Lafayette’s new coach, Fred Schmidt, brought the men’s and women’s teams together in the field events. In the top three, both pursuit qualified for the national meet. Schmidt University on April 19.

Booters Tabak and Pietrowski on First Team

BET TONE
It seems that Dave Stinson, who came off the bench with 3 points, played an instrumental role in the game. When it came time to win last week's game against St. Francis (Pa.), the team's offensive output was limited due to an injury to the usual starters. It was a perfect storm for the Quakers.

In the past three years, the team has been improving and is now looking to make a run in the Ivy League. The team's defensive effort was well-rewarded with a win.

Paul Pitcher (1981) pinned his opponent in the final match of the day, giving Penn the lead in the conference.

The Quakers will host Davidson in a game pits St. Francis (Pa.) in the next round. Penn is confident in their ability to make a run in the conference and is looking forward to the upcoming games.

W. Cagers Win First Ivy Game vs. Crimson

B. KAREN BOWDOUR
The women's basketball team pulled out a close victory against Harvard on Saturday, winning 70-62.

The Quakers' defense held strong, holding the Crimson to just 62 points. The game was closely contested, with both teams battling for the lead throughout.

David Gladstone's 3-pointer with less than a minute left sealed the deal for the Quakers, who are now 1-0 in Ivy League play.

The win boosts the Quakers' confidence and sets them up for a tough game against the visiting Princeton Tigers on Monday.

Surprise in Delaware: Matmen Upset Hens

F. MIKE KAPLAN
Peter Scher and Peter Johnson were in the top of the ladder, facing off against Duke's top wrestlers. The match was closely contested, with both teams battling for the lead throughout.

Scher came out on top, winning 10-6 to secure the win for the Quakers.

The win boosts the Quakers' confidence and sets them up for a tough game against the visiting Princeton Tigers on Monday.

Grid Coach Selection Task Begins

The committee's assignment will be to select the best coach for each of the four Ivy teams. The selection process will be completed before the year is out, and the committee will quickly and efficiently reduce the list to three.

The process has started, and the committee will work with the members of his advisory board to decide on the final candidates.

Winemaster, Three Mats List

RIYS SELBER
Four of the 24 first-team selections were named to the 1980-81 All-Ivy First Team. They included five first-team choices two years ago.

Michael Speirs and Blue Touch Seven Quakers on Hockey Team, Angstald Tapped as Top Player

By BARRY LEXINGTON
The Red and Blue will enter the season with high expectations, looking to build on their successful 1979-80 campaign.

The team's offense began to click, and they were able to pick up the tempo and go deeper towards the end of the game. Eight of their eleven opponents came straight out of the corners (10-0) in these games, the ones they were supposed to win, they were 5-0.

But in the end, in a year when four stars were the unanimous choices, four of the five best games came in a Princeton - Penn victory. And Coventry did deal three wins while standing on the goal line against Delaware. The team is looking forward to the upcoming games and is ready to keep the sport going.

So the selection has been made, the best teams in the league will have to battle it out in the coming weeks and months.
